## Περίληψη

Τα τελευταία χρόνια αναπτύσσονται συνεχώς τεχνολογίες στον τομέα του Διαδικτύου των Πραγμάτων(ΔτΠ), υπάρχει μεγάλη εξέλιξη στο πλαίσιο των Έξυπνων Πόλεων, καθώς και όσον αφορά το πλήθος των υπηρεσιών που δημιουργούνται και παρέχονται ασταμάτητα στις μέρες μας. Απόρροια αυτών των εξελίξεων είναι η ακατάπαυστη παραγωγή τεραστίου όγκου δεδομένων, πολλά από αυτά ελεύθερα διαθέσιμα(Ανοιχτά Δεδομένα), και η ανάγκη αξιοποίησης αυτών.

Εντασσόμενη στο πλαίσιο των τεχνολογιών του Διαδικτύου των Πραγμάτων, η διπλωματική εργασία ακολουθεί μια λογική κατά την οποία λαμβάνουμε δεδομένα από πηγές Ανοιχτών Δεδομένων, τα επεξεργαζόμαστε και τα αναλύουμε, ώστε να προκύψουν πληροφορίες, που θα είναι χρήσιμες για κάποιους φορείς, εταιρείες ή και οργανισμούς, και θα μπορέσουν έτσι να αξιοποιηθούν για ξεχωριστούς σκοπούς και εφαρμογές. Μέσα από αυτή τη διαδικασία, στόχος είναι να εξαχθεί αποδοτική γνώση και να επιτευχθούν ωφέλιμα αποτελέσματα.

Αρχικά, η εργασία προβαίνει σε βιβλιογραφική έρευνα προκειμένου να εντοπίσει διαθέσιμες πηγές Ανοιχτών Δεδομένων. Έπειτα, ασχολείται με δύο τομείς. Τα θέματα τα οποία πραγματεύεται είναι ο καιρός και τα γεγονότα. Στο ένα προσδιορίζεται η ωριαία κατάσταση του καιρού στο διάστημα μιας ημέρας και στο άλλο πραγματοποιείται η παραγωγή δομημένης και συγκεκριμένης πληροφορίας σχετικά με συμβάντα, εκδηλώσεις και διοργανώσεις που διεξάγονται σε συγκεκριμένους χώρους και κτίρια. Τέλος, διερευνάται ένας ενδεχόμενος συνδυασμός αυτών των λειτουργιών και των αποτελεσμάτων τους, ούτως ώστε να παραχθεί κάποιο άλλο ωφέλιμο αποτέλεσμα.

Όλα αυτά ενσωματώνονται στην εργασία, όπου γίνεται προσπάθεια οργανωμένης παρουσίασης αυτών, ακολουθώντας μια δομή επεξήγησης των βημάτων, από την έρευνα πηγών, την επεξήγηση της ροής εργασίας του κάθε τομέα, καθώς και την προσέγγιση των σεναρίων χρήσης των αποτελεσμάτων που προκύπτουν, έως την παρουσίαση του σταδίου υλοποίησης του καθενός, την πρόταση κάποιας συνδυαστικής λογικής και ολοκληρώνεται με την παράθεση του κώδικα των συγκεκριμένων υλοποιήσεων-ροών.

**Λέξεις κλειδιά :** Διαδίκτυο των Πραγμάτων, IoT, Ανοιχτά Δεδομένα, πηγές Ανοιχτών Δεδομένων, καιρός, γεγονότα, εκδηλώσεις, JSON, REST, Node-RED, JavaScript, IoT Analytics

## Abstract

The technological development in the field of Internet of Things(IoT), is continuously rising. There has also been a significant evolution in Smart Cities frameworks, as well as the number of services which are being created and provided incessantly. The aftereffect of these developments is the constant production of a massive volume of data, the majority of which is freely available(Open Data). Therefore, the need of utilisation of this large volume of data is arisen.

Within the framework of Internet of Things technologies, this diploma thesis is aiming to explore the logic with which data from Open Data sources are being received, processed, and analysed. Therefore, information is being generated which may be useful to relevant companies and organisations, and will thus be able to be exploited for separate purposes and applications. The final goal through that process is to extract efficient knowledge and achieve beneficial results.

Initially, in this thesis a literature search is being conducted in order to identify available sources of Open Data. Subsequently, the thesis is dealing with the two following topics: weather and events. The former, aims to define the hourly weather state during a 24 hour period and the latter describes the process of the production of specific and well organised information, relevant with events which are being held in specific venues. Finally, a possible combination of these functions and their results is being investigated, in order to produce another beneficial effect.

In conclusion, all of the above are integrated in this thesis where a structural presentation is made of the following steps: searching the sources, explaining the workflow of each sector as well as approaching various use-scenarios for each result, presenting the stages of implementation of each topic and formulating a combinational logic proposal. Finally, this thesis is completed with quoting a code of the already specified implementation-flows.

## **Ευχαριστίες**

Αρχικά, θα ήθελα να ευχαριστήσω ιδιαίτερα την καθηγήτρια κα Θεοδώρα Βαρβαρίγου για την εμπιστοσύνη που μου έδειξε, για τη δυνατότητα που μου έδωσε να εκπονήσω τη διπλωματική μου κάτω από την επίβλεψή της, για την ευκαιρία που μου έδωσε να δουλέψω πάνω στο συγκεκριμένο πολύ ενδιαφέρον θέμα και να μάθω περισσότερα για τις τεχνολογικές εξελίξεις, καθώς επίσης και τα μέλη της επιτροπής, τον καθηγητή κ. Εμμανουήλ Βαρβαρίγο και τον καθηγητή κ. Δημήτριο Ασκούνη.

Ακόμα, θα ήθελα να ευχαριστήσω τον διδάκτορα κ. Γεώργιο Κουσιουρή για την προθυμία του για συζήτηση οποιαδήποτε στιγμή χρειαζόταν, για τον σημαντικό χρόνο που αφιέρωσε για τα θέματα που προέκυπταν και για την βοήθεια και για την καθοδήγηση στην εκπόνηση αυτής της διπλωματικής εργασίας.

Επίσης, θα ήθελα να ευχαριστήσω την αδερφή μου Ειρήνη Μαρτίνου για τη βοήθειά της στην απόδοση της περίληψης αυτής της διπλωματικής εργασίας στην αγγλική γλώσσα, κατά τη συγγραφή του Abstract.

Τέλος, θα ήθελα να ευχαριστήσω τους γονείς μου και την αδερφή μου για την υποστήριξή τους τόσο κατά τη διάρκεια εκπόνησης της παρούσας εργασίας όσο και κατά τη διάρκεια των σπουδών μου στο Δημοκρίτειο και στο Εθνικό Μετσόβιο Πολυτεχνείο.

## 1.Εισαγωγή

Στις μέρες μας είναι αισθητό το φαινόμενο κατά το οποίο κάποια δεδομένα είναι ελεύθερα διαθέσιμα σε όλους ώστε να τα χρησιμοποιούν και να τα αναδημοσιεύουν χωρίς περιορισμούς από πνευματικά δικαιώματα, διπλώματα ευρεσιτεχνίας ή άλλους μηχανισμούς ελέγχου.<sup>[1]</sup> Πρόκειται για πληροφορίες ή περιεχόμενο που είναι ελεύθερα διαθέσιμο για χρήση και αναδιανομή, με την προϋπόθεση μόνο απόδοσής του στην πηγή.<sup>[2]</sup> Όλα αυτά ορίζουν την έννοια «Ανοιχτά Δεδομένα(Open Data)»,..τα οποία μπορούν να προέρχονται από οποιαδήποτε πηγή<sup>[1]</sup> και είναι προσπελάσιμα από το κοινό μέσω μιας ποικιλίας τεχνολογιών πρόσβασης<sup>[3]</sup>.

Από την άλλη οι απαιτήσεις στις πόλεις αυξάνονται παντού. Η ανάγκη αντιμετώπισης αυτών των απαιτήσεων μας οδηγεί στο να προσεγγίζουμε συνεχώς τη λεγόμενη έννοια των «Εξυπνων Πόλεων» (Smart City concept).Ο τελικός στόχος αυτής της έννοιας είναι να αξιοποιηθούν καλύτερα οι δημόσιοι πόροι, να αυξηθεί η ποιότητα των υπηρεσιών που προσφέρονται στους πολίτες, μειώνοντας παράλληλα τις δαπάνες λειτουργίας των δημόσιων διοικήσεων.<sup>[4]</sup> Για να επιτευχθεί αυτό χρειάζεται τα κύρια χαρακτηριστικά μιας έξυπνης πόλης να περιλαμβάνουν έναν υψηλό βαθμό ενοποίησης των τεχνολογιών της πληροφορίας και μια ολοκληρωμένη εφαρμογή των πληροφοριακών πόρων.<sup>[5]</sup>

Άλλη μία έννοια που έχει εισαχθεί τελευταία είναι το «Διαδίκτυο των Πραγμάτων (Internet of Things)».Το διαδίκτυο των πραγμάτων(IoT) είναι ένα δίκτυο φυσικών αντικειμένων που περιέχουν ενσωματωμένη τεχνολογία για να επικοινωνούν και να αντιλαμβάνονται ή να αλληλεπιδρούν με τις εσωτερικές τους καταστάσεις ή το εξωτερικό περιβάλλον.<sup>[6]</sup> Το διαδίκτυο των πραγμάτων είναι δηλαδή ένα σύστημα από «πράγματα» (“things”), όπως αλληλένδετες υπολογιστικές συσκευές, μηχανικές και ψηφιακές μηχανές, αντικείμενα, ζώα ή πρόσωπα που διαθέτουν μοναδικά αναγνωριστικά στοιχεία και τη δυνατότητα μεταφοράς δεδομένων μέσω ενός δικτύου χωρίς να απαιτείται ανθρώπινη αλληλεπίδραση ή αλληλεπίδραση ανθρώπου με υπολογιστή.<sup>[7]</sup> Με αυτή τη διαδικασία ένα πράγμα, ένα αντικείμενο μπορεί και εκπροσωπεί τον εαυτό του ψηφιακά με αποτέλεσμα να καθίσταται ως κάτι πιο σπουδαίο από το αντικείμενο από μόνο του.<sup>[8]</sup> Σε αυτό το πλαίσιο του διαδικτύου των πραγμάτων υπάρχει ένα ευρύ φάσμα από τεχνολογίες, κάποιες από τις πιο σημαντικές είναι η Ασφάλεια IoT, η Διαχείριση IoT Συσκευών (Thing), τα χαμηλής κατανάλωσης δίκτυα IoT μικρής εμβέλειας, τα χαμηλής κατανάλωσης δίκτυα ευρείας περιοχής, οι επεξεργαστές IoT, τα λειτουργικά συστήματα IoT, η επεξεργασία ροής γεγονότων, οι πλατφόρμες IoT και τα IoT πρότυπα και οικοσυστήματα,<sup>[9]</sup>,καθώς είναι απαραίτητες

για τη σωστή θεμελίωση, υλοποίηση και διαχείριση του διαδικτύου των πραγμάτων(IoT).

Διευρύνοντας την αντίληψή μας συνειδητοποιούμε πώς αυτές οι έννοιες συνδέονται μεταξύ τους.

Το διαδίκτυο των πραγμάτων(IoT) επιτρέπει την εύκολη πρόσβαση και αλληλεπίδραση με μια μεγάλη ποικιλία συσκευών, όπως για παράδειγμα οικιακές συσκευές, κάμερες παρακολούθησης, αισθητήρες παρακολούθησης, ενεργοποιητές, οθόνες, οχήματα και πολλές άλλες.<sup>[4]</sup> Κάθε συσκευή, κάθε «πράγμα»(“thing”) δημιουργεί ακατάπαυστα δεδομένα, τα οποία μπορούν να είναι ελεύθερα διαθέσιμα(Open Data). Ως επακόλουθο το διαδίκτυο των πραγμάτων προωθεί την ανάπτυξη εφαρμογών που αξιοποιούν τη δυνητικά τεράστια ποσότητα και ποικιλία των δεδομένων που παράγονται από τέτοια αντικείμενα<sup>[4]</sup>, οι οποίες συμβάλλουν με τη σειρά τους στην παραγωγή δεδομένων, ιδίως των ανοιχτών δεδομένων(Open Data). Με αυτόν τον τρόπο στοχεύει να παρέχει νέες υπηρεσίες στους πολίτες, τις επιχειρήσεις και τις δημόσιες διοικήσεις. Αυτό το πρότυπο πράγματι βρίσκει εφαρμογή σε πολλούς διαφορετικούς τομείς, όπως ο αυτοματισμός στο σπίτι, ο βιομηχανικός αυτοματισμός, τα ιατρικά βοηθήματα, η κινητή υγειονομική περίθαλψη, η ευφυής διαχείριση ενέργειας και τα έξυπνα δίκτυα, η αυτοκινητοβιομηχανία, η διαχείριση της κυκλοφορίας και πολλά άλλα.<sup>[4]</sup> Επίσης, οι τεχνολογίες του διαδικτύου των πραγμάτων<sup>[9]</sup> στηρίζονται στα ανοιχτά δεδομένα(Open Data). Κάποιες τα χρησιμοποιούν, κάποιες είτε τα επεξεργάζονται είτε τα αναλύουν, κάποιες άλλες τα χειρίζονται, ενώ άλλες καλούνται να υποστηρίξουν λειτουργίες που βασίζονται στο διαμοιρασμό αυτών των ανοιχτών δεδομένων μεταξύ των συσκευών ή και οργανισμών. Συνεπώς διαπιστώνουμε πώς σχετίζεται το διαδίκτυο των πραγμάτων(IoT) με τα ανοιχτά δεδομένα(Open Data), καθώς στηρίζεται σε αυτά και συμβάλλει ακόμα περισσότερο στην παραγωγή τους.

Οι τομείς στους οποίους βρίσκει εφαρμογή το διαδίκτυο των πραγμάτων(IoT),μερικοί από τους οποίους προαναφέρθηκαν, αποτελούν κάποια από τα πιο βασικά πεδία που απασχολούν μια «Έξυπνη Πόλη»(“Smart City”). Οι έξυπνες πόλεις χρησιμοποιούν τις τεχνολογίες του διαδικτύου των πραγμάτων και όλες αυτές οι συσκευές, οι εφαρμογές και οι υπηρεσίες που το διαδίκτυο των πραγμάτων εισάγει, αναπτύσσει και παρέχει είναι αναγκαίες για τη λειτουργία μιας έξυπνης πόλης. Μια έξυπνη πόλη προκειμένου να μπορέσει να είναι πόλη «με όργανα», «διασυνδεδεμένη» και «ευφυής» χρειάζεται να υποστηρίζεται τεχνικά από το διαδίκτυο των πραγμάτων<sup>[5]</sup> και γενικότερα τα οφέλη του διαδικτύου των πραγμάτων(IoT) στη διαχείριση και την υποδομή της είναι πολύ σημαντικά.

Σε συμφωνία με τα ανωτέρω, χαρακτηριστικά αναφέρονται:

«Μια έξυπνη πόλη είναι ένα όραμα αστικής ανάπτυξης που θα ενοποιεί την τεχνολογία της πληροφορίας και των επικοινωνιών(ΙCT) με την τεχνολογία του διαδικτύου των πραγμάτων(IoT) με ασφαλή τρόπο για τη διαχείριση των πόρων της πόλης.»  
-Smart city,Wikipedia<sup>[10]</sup>

«Η έξυπνη πόλη είναι το προϊόν της επιταχυνόμενης ανάπτυξης της νέα γενιάς της τεχνολογίας της πληροφορίας και της οικονομίας της γνώσης, βασισμένης στο συνδυασμό δικτύων του Διαδικτύου, του τηλεπικοινωνιακού δικτύου, του δικτύου εκπομπών, του ασύρματου ευρυζωνικού δικτύου και άλλων δικτύων αισθητήρων όπου η τεχνολογία του Διαδικτύου των Πραγμάτων(IoT) αποτελεί τον πυρήνα της»  
-Special Issue on Smart City and Internet of Things, Elsevier<sup>[5]</sup>

«...,η επιτυχής υλοποίηση των έργων των έξυπνων πόλεων εξαρτάται σε μεγάλο βαθμό από τις τεχνολογίες-επικοινωνίες δεδομένων, τα υπολογιστικά νέφη, την ικανότητα μετάδοσης κίνησης, και τους αισθητήρες που συγκροτούν συνολικά το IoT οικοσύστημα.  
Αυτές οι τεχνολογίες θέτουν τα θεμέλια για τα έργα των έξυπνων πόλεων.  
Οι ταχείες εξελίξεις σε αυτούς τους τομείς, τα τελευταία χρόνια, επέτρεψαν την καλύτερη σύνδεση των αντικειμένων με αποτέλεσμα την πλήρη ανάπτυξη πιο έξυπνων οικοσυστημάτων.»  
-Smart Cities Market worth 1,201.69 Billion USD by 2022, MarketsAndMarkets<sup>[11]</sup>

Καθώς, λοιπόν, εξελίσσεται το διαδίκτυο των πραγμάτων(IoT) και αναπτύσσονται έξυπνες πόλεις(Smart Cities), όπου γίνεται χρήση των IoT τεχνολογιών και στις οποίες εφαρμόζεται η έννοια του διαδικτύου των πραγμάτων(IoT), τόσο πολλαπλασιάζονται οι συσκευές, οι υπηρεσίες και οι εφαρμογές του, με αποτέλεσμα να υπάρχει μία συνεχώς αυξανόμενη ποσότητα δεδομένων και κυρίως των δεδομένων ελεύθερης πρόσβασης(Open Data).

Μπορούμε να πάρουμε μια ένδειξη της κατάστασης συμβουλευόμενοι τις μελλοντικές εκτιμήσεις κάποιων επίσημων και έγκυρων φορέων.

Σχετικά με το Διαδίκτυο των Πραγμάτων(IoT), ο Dave Evans, ο οποίος είναι ο CTO της Stringify προσδοκά ότι θα δει 30 δισεκατομμύρια συνδεδεμένες συσκευές μέχρι το 2020. Παρόμοιες απόψεις έχουν υιοθετήσει εταιρείες, όπως η IHS Markit που προσχεδιάζει 30.7 δισεκατομμύρια συσκευές IoT για το 2020, η Gartner η οποία προβλέπει 20.4 δισεκατομμύρια μέχρι τότε (εξαιρουμένων των smartphones, των

tablet και των υπολογιστών) και η IDC που εκτιμά τα 28.1 δισεκατομμύρια (χωρίς να υπολογίζει ούτε εκείνη τις συσκευές αυτές).<sup>[12]</sup> <sup>[13]</sup>

Όσον αφορά τις Έξυπνες Πόλεις(Smart Cities), όπως δηλώνεται σε επίσημη έκθεση το μέγεθος της παγκόσμιας αγοράς των έξυπνων πόλεων προβλέπεται να αυξηθεί από 424.68 δισεκατομμύρια δολάρια το 2017 σε 1,201.69 δισεκατομμύρια δολάρια μέχρι το 2022, με ετήσιο συντελεστή ανάπτυξης (CAGR) 23.1% κατά την περίοδο πρόβλεψης<sup>[11]</sup> <sup>[14]</sup> και μια πρόσφατα δημοσιευμένη έκθεση από την Persistence Market Research προσδιορίζει ότι η παγκόσμια αγορά έξυπνων πόλεων θα αυξηθεί από τα τρέχοντα 622 δισεκατομμύρια δολάρια, θα περάσει την αγορά του ενός τρισεκατομμυρίου δολαρίων το 2019 για να φτάσει τελικά σε 3.48 τρισεκατομμύρια δολάρια μέχρι το 2026<sup>[15]</sup> <sup>[16]</sup> <sup>[17]</sup> με ταυτόχρονη επίδραση στα ελεύθερα διαθέσιμα δεδομένα(Open Data)<sup>[18]</sup> <sup>[19]</sup>.

Μέσα από αυτές τις προβλέψεις διακρίνουμε τις προοπτικές του τομέα του Διαδικτύου των Πραγμάτων(IoT), την επέκταση των Έξυπνων Πόλεων(Smart Cities) και αναμένουμε μια έκρηξη παραγόμενων δεδομένων και ιδιαίτερα των ελεύθερα προσβάσιμων δεδομένων, των Ανοιχτών Δεδομένων(Open Data).

## 2. Ερευνα Πηγών

Αρχικό στάδιο της διπλωματικής εργασίας ήταν η εύρεση διαθέσιμων πηγών Ανοιχτών Δεδομένων (open data sources), δηλαδή η έρευνα για υπάρχουσες πηγές που να επιτρέπουν την ελεύθερη πρόσβαση στα δεδομένα που διαθέτουν.

Η έρευνα επικεντρώθηκε στην εύρεση πηγών Ανοιχτών Δεδομένων που να διαθέτουν τα δεδομένα τους κυρίως με το μορφότυπο JSON, XML ή και CSV. Μέσα σε αυτό το πλήθος συνδέσμων (βλ. Πίνακας 1) συναντώνται διαφόρου είδους πηγές, όπως πύλες(Portals), αποθετήρια δεδομένων(Repositories), ιστοσελίδες που περιέχουν περισσότερους χρήσιμους συνδέσμους(links), ιστοσελίδες που αναφέρουν πηγές υπό τη μορφή κειμένου και πολλές άλλες, που διαθέτουν ελεύθερα ποικίλα δεδομένα διαφόρων ειδών (πχ. δεδομένα πραγματικού χρόνου(real-time data), ιστορικά δεδομένα(historical data), στατιστικά στοιχεία(statistics), σύνολα δεδομένων(datasets) και άλλα) μέσω διαφόρων τρόπων πρόσβασης είτε ακολουθώντας κάποιο πρωτόκολλο, είτε ως υπηρεσίες API, ακόμα ως σύνδεσμοι για λήψη αρχείων ή ως δημοσιευμένη πληροφορία σε πίνακες(tables), σε χάρτες ή σε άλλη μορφή που να μπορεί να αντληθεί με τη χρήση κάποιου εργαλείου.(βλ. Παράρτημα A)

Μέσα από την πληθώρα πηγών ανοιχτών δεδομένων που βρέθηκαν και που παρουσιάζονται στον παρακάτω πίνακα(βλ. Πίνακας 1), αξιοποιήθηκαν δύο συγκεκριμένες πηγές ανοιχτών δεδομένων.

Η πηγή Ανοιχτών Δεδομένων στο θέμα του καιρού είναι η υπηρεσία Dark Sky API<sup>[23][24]</sup> που διαθέτει τα δεδομένα υπό το μορφότυπο JSON<sup>[24][25][27]</sup> μέσω του πρωτοκόλλου REST<sup>[27]</sup> (βλ. Παράρτημα A). Πιο λεπτομερώς, στην εργασία πραγματοποιήθηκε αίτηση API τύπου Time Machine Request που επιστρέφει τον παρατηρούμενο (στο παρελθόν) ή τον προβλεπόμενο (μελλοντικά) καιρό και τις καιρικές συνθήκες για μια συγκεκριμένη ημερομηνία<sup>[26]</sup>.

Το θέμα των γεγονότων-εκδηλώσεων βασίστηκε στην πηγή Ανοιχτών Δεδομένων Eventbrite<sup>[28][29][31]</sup>, η οποία είναι επίσης μία REST-based υπηρεσία API<sup>[29][30]</sup> με απόκριση κλήσεων σύμφωνα με το μορφότυπο JSON<sup>[30]</sup>. Ειδικότερα, στο πλαίσιο της εργασίας πραγματοποιήθηκαν αιτήσεις για έρευνα γεγονότων-εκδηλώσεων(events)<sup>[32]</sup>, για προσδιορισμό των κατηγοριών(categories) και των υποκατηγοριών(subcategories) των εκδηλώσεων<sup>[33]</sup> καθώς και για τις μορφές-τύπους(formats) των εκδηλώσεων<sup>[34]</sup> έχοντας η κάθε μία την αντίστοιχη απόκριση<sup>[35]</sup>.

**Πίνακας 1 : Πηγές Ανοιχτών Δεδομένων(Open Data Sources)**

### **3.Σενάριο χρήσης πηγών και ανίχνευσης δεδομένων**

Στη συνέχεια, έγινε επεξεργασία και ανάλυση των δεδομένων αυτών των συγκεκριμένων πηγών ανοιχτών δεδομένων, σύμφωνα με τις αφαιρετικές ροές εργασιών 3.1.1 και 3.2.1, ώστε να προκύψει κάποια ουσιαστικής σημασίας πληροφορία, η οποία θα μας βοηθήσει στο να προβλέπουμε και να προλαμβάνουμε μείζων καταστάσεις, καθώς και να ανταποκρινόμαστε καλύτερα στις ανάγκες που προκύπτουν σε διάφορους τομείς (3.1.2 και 3.2.2).

### 3.1 Καιρός

#### 3.1.1 Ροή εργασίας

Σε αυτό το διάγραμμα ροής εμφανίζονται τα βήματα της εργασίας στο θέμα του καιρού.

Εικόνα 1 : Ροή εργασίας καιρού

### 3.1.2 Σενάρια χρήσης

Οι πληροφορίες που εξάγονται από τη χρήση της εφαρμογής της διπλωματικής εργασίας στο θέμα του καιρού είναι :

#### 1 Χρονικοί περίοδοι εύρεσης κατάστασης καιρού

Εύρεση κατάστασης καιρού σε δεδομένα :

- Ιστορικά(historical)
- Παρελθοντικά(yesterday-previous days-past)
- Σημερινά(today)
- Αυριανά(tomorrow-next days-next weeks)
- Μελλοντικά(future) με πρόβλεψη ενός χρόνου(1 year forecast)

#### 2 Εύρεση της **κατάστασης** του καιρού με τις διακριτές τιμές

- good
- normal
- bad

#### 3 Εύρεση για μία **ημέρα** της ωριαία κατάστασης του καιρού

#### 4 Εύρεση για κάθε **ώρα** μίας ημέρας της κατάστασης του καιρού

#### 5 Εύρεση για την πόλη της **Αθήνας** της ωριαίας κατάστασης του καιρού

Από τη γνώση της κατάστασης του καιρού μπορούμε να διαπιστώσουμε εάν οι καιρικές συνθήκες διαμορφώνουν το φυσιολογικό, για κάθε εποχή, κλίμα που διακρίνει μία εύκρατη περιοχή, όπως η Αθήνα. Σε μία εύκρατη περιοχή υπάρχουν τέσσερις εποχές σε ένα έτος που δημιουργούν έναν κύκλο εμφάνισης, τον κύκλο των εποχών(Φθινόπωρο, Χειμώνας, Ανοιξη, Καλοκαίρι) και η κάθε μία χαρακτηρίζεται από το δικό της εύρος καιρικών συνθηκών.

Με μία τέτοια ανάλυση μπορούν να προκύψουν οι εξής χρήσιμες πληροφορίες :

- Εάν εμφανίζονται κατά τη διάρκεια του έτους **όλες** οι εποχές,
- Εάν υπάρχει **κυκλική εναλλαγή** των τεσσάρων εποχών,
- Εάν διαδέχονται η μία την άλλη με τη συγκεκριμένη **φυσιολογική σειρά**
- Και εάν η εμφάνιση της κάθε μίας γίνεται την **κατάλληλη για την περιοχή περίοδο**

Αυτό επιβεβαιώνεται από την επικράτηση της τιμής normal στην κατάσταση του καιρού.

Κάθε άλλη περίπτωση όπου υπερισχύει η κατάσταση καιρού good ή bad είναι μη φυσιολογική για αυτή την εύκρατη περιοχή, την Αθήνα, είτε πρόκειται για κατάσταση καιρού άνετη για τον άνθρωπο, είτε για κατάσταση που οφείλεται σε επιδείνωση των καιρικών συνθηκών, καθώς η ύπαρξη μιας τέτοιας απόκλισης μπορεί να αποδειχθεί ανησυχητική.

Μία τέτοια πληροφορία μπορεί να ανακαλυφθεί ύστερα από έρευνα που βασίζεται σε παρελθοντική και ιστορική κατάσταση του καιρού(κλήση υπορροής-subflow για ιστορικό(historical) χρόνο), χρήσιμη για επιστημονική έρευνα(scientific research) που μπορεί να αφορά την Επιστήμη του περιβάλλοντος(Environmental science) ή την Κλιματολογία(Climatology-climate science), μπορεί να παρατηρηθεί μέσα από έλεγχο προσφάτων στοιχείων(κλήση υπορροής-subflow για παρελθοντικά,σημερινά και αυριανά δεδομένα(past, today, next days)) με χρήση αυτής της πληροφορίας από κλιματικές εφαρμογές(climate apps), είτε μπορεί να ληφθεί ως αίσθηση για το επερχόμενο διάστημα του ενός χρόνου με την πρόβλεψη της κατάστασης του καιρού(κλήση υπορροής-subflow για μελλοντικά δεδομένα(future-1 year forecast)), αποκτώντας μια γενικότερη αντίληψη των περιστάσεων που θα ακολουθήσουν σε τομείς επηρεαζόμενους από την κατάσταση του καιρού σε τοπικό επίπεδο, στην πόλη της Αθήνας.

Η εφαρμογή της εργασίας στο θέμα του καιρού μπορεί να χρησιμοποιηθεί και στον τομέα της υγείας.

Σε περίπτωση που, υπάρχει επίδραση του καιρού στην κατάσταση της υγείας ορισμένων ανθρώπων, να μπορεί μία εφαρμογή, όπως μια εφαρμογή για την υγεία(health app), να τους ειδοποιεί, προκειμένου να κάνουν τις απαραίτητες ενέργειες, ώστε να προληφθούν οι ανεπιθύμητες συνέπειες που μπορεί να υπάρξουν από μία τέτοια κατάσταση καιρού(κατάσταση bad), βασιζόμενη σε αυριανά και μελλοντικά δεδομένα(tomorrow-next days-next weeks, future).

Ακόμα, συνδυάζοντας την κατάσταση του καιρού σε παρελθοντικό και τωρινό χρόνο(yesterday, today) με μια εφαρμογή παρακολούθησης υγείας(health monitoring app) μπορεί να γίνει ανάλυση και παρακολούθηση της πορείας της υγείας(βελτίωση,επιδείνωση ή μέτρια κατάσταση) σε σχέση με τον καιρό.

Άλλη μια χρήση της εφαρμογής αυτής, και συγκεκριμένα της γνώσης της κατάστασης του καιρού για μελλοντικό χρονικό διάστημα, είναι να επιλεγεί το χρονικό διάστημα ενός γεγονότος-μιας εκδήλωσης που θα διεξαχθεί στην Αθήνα, είτε πρόκειται για επιλογή ημερών ή ωρών σε μία ημέρα, ή να επιλεγεί ο χώρος-κτίριο της εκδήλωσης, εάν θα είναι κλειστός ή ανοιχτός, γνωρίζοντας την ακριβή ώρα και χρόνο διεξαγωγής, με βάση την προβλεπόμενη κατάσταση του καιρού.

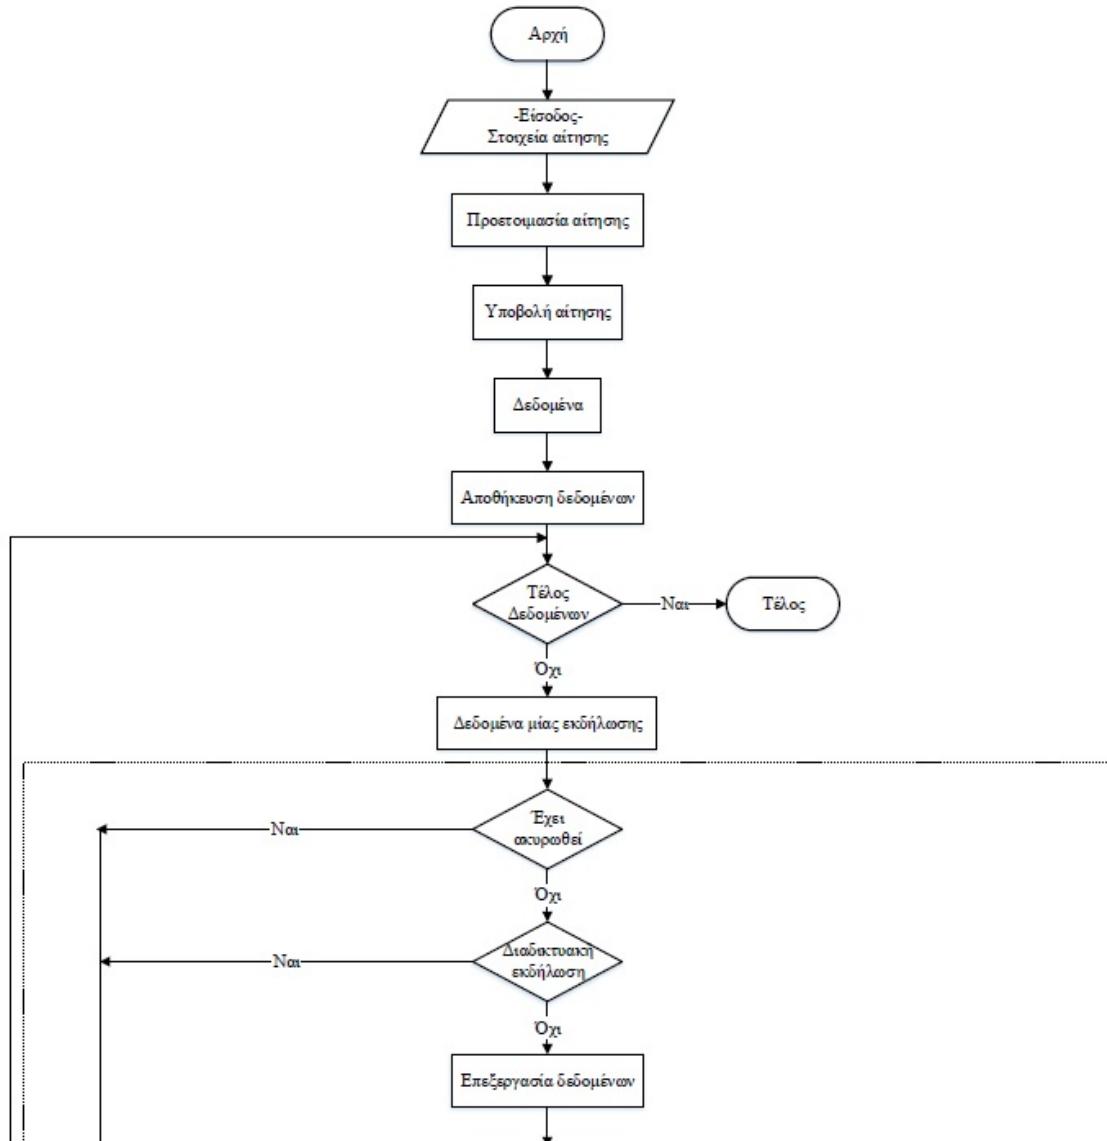

Μία επιπλέον χρησιμότητα της εφαρμογής μπορεί να προκύψει σε συνδυασμό με analytics, παράγοντας περισσότερες πληροφορίες, όπως στον τομέα αθλητισμού, εάν υπάρχει κάποια εποχή όπου η κάθε αθλητική ομάδα αποδίδει καλύτερα ή ειδικότερα, σε κάθε εποχή, εάν υπάρχει κάποια κατάσταση καιρού στην οποία η κάθε αθλητική ομάδα να έχει τις περισσότερες επιτυχίες, όταν ο αγώνας πραγματοποιείται στην Αθήνα και σε ανοιχτό χώρο διεξαγωγής.

Συνοψίζοντας, η πληροφορία που παράγεται από την εφαρμογή της διπλωματικής εργασίας στο θέμα του καιρού μπορεί να διαχειρισθεί με ποικίλους τρόπους, να αποδειχθεί χρήσιμη και να αξιοποιηθεί από πολλούς διαφορετικούς τομείς.

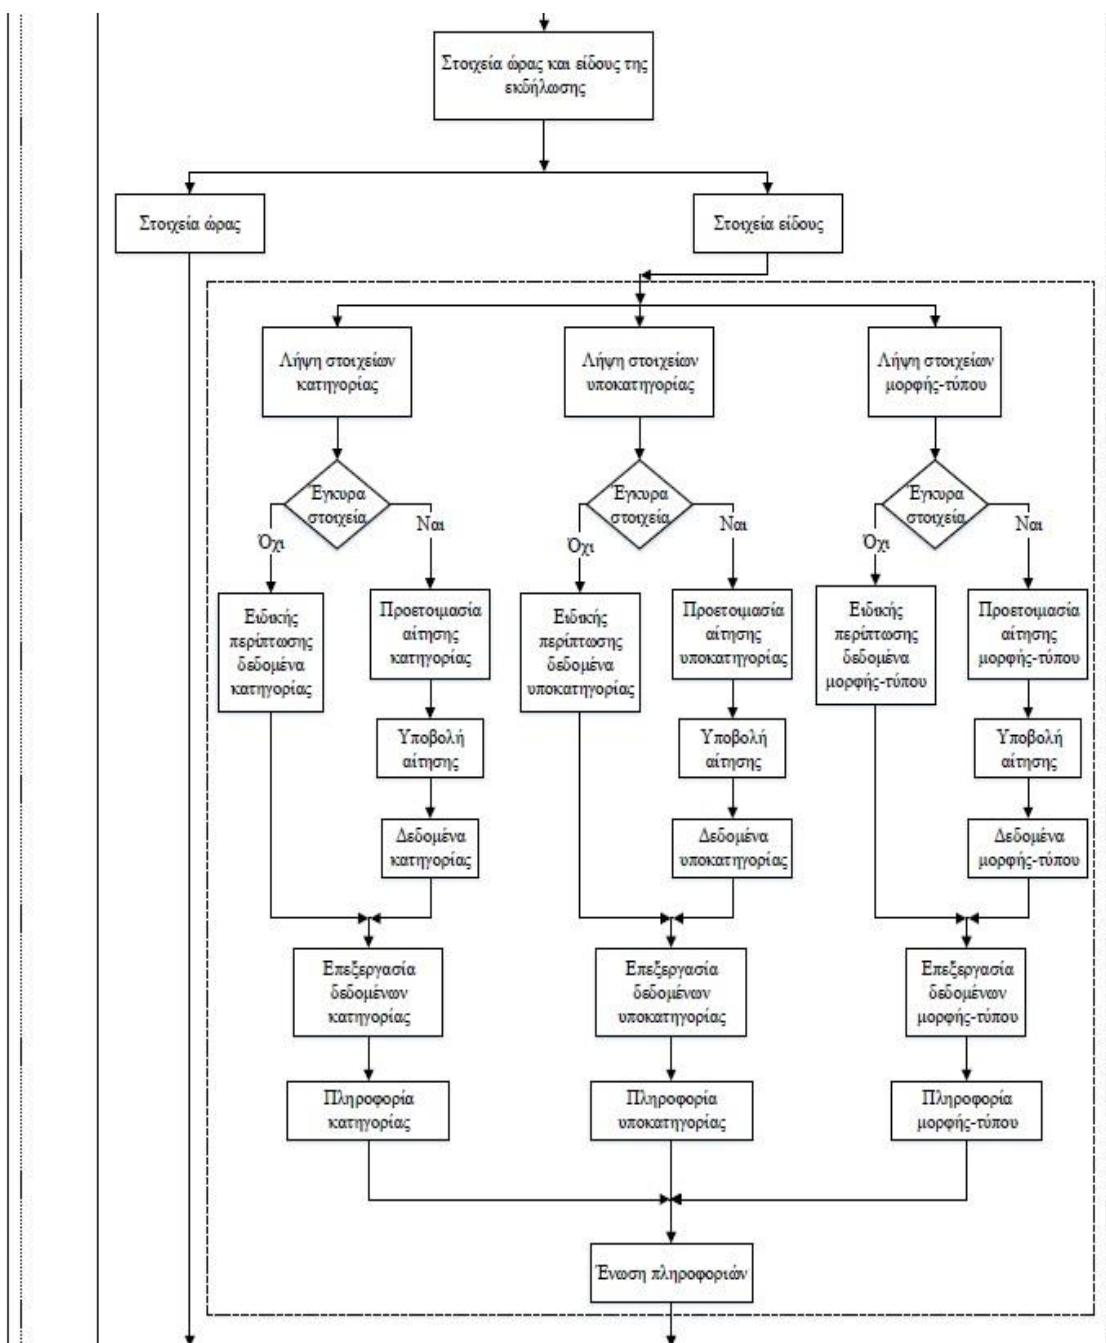

## 3.2 Γεγονότα - Εκδηλώσεις

### 3.2.1 Ροή εργασίας

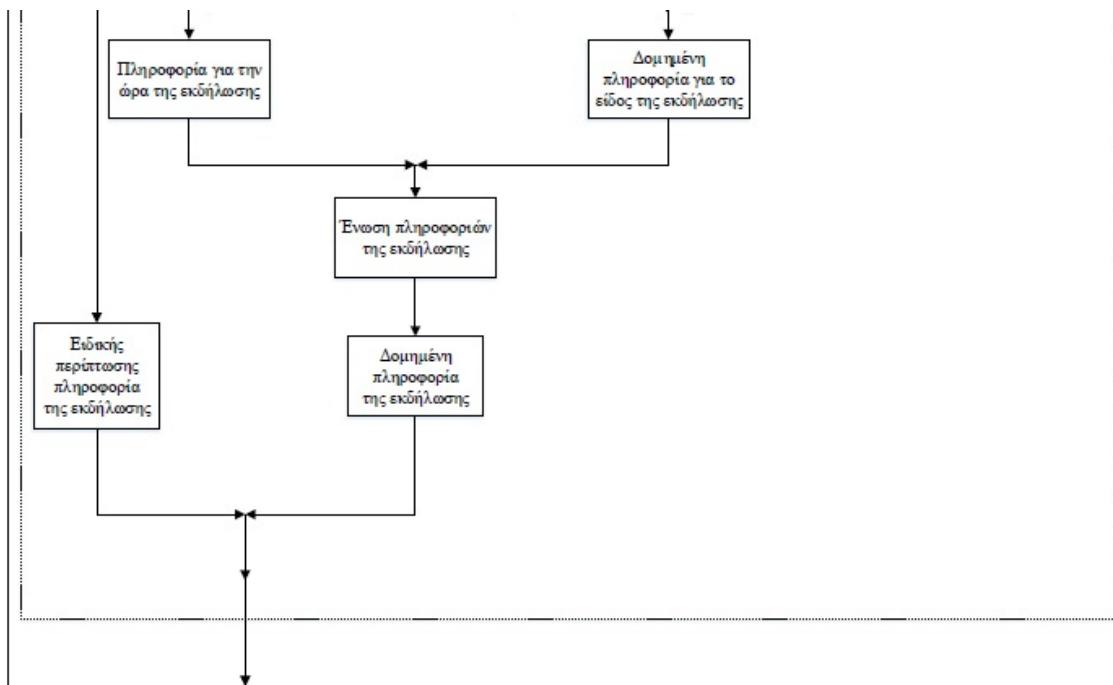

Η διαδικασία που ακολουθησε η διπλωματική εργασία στο θέμα των γεγονότων-εκδηλώσεων αναπαρίσταται στο παρακάτω διάγραμμα ροής.

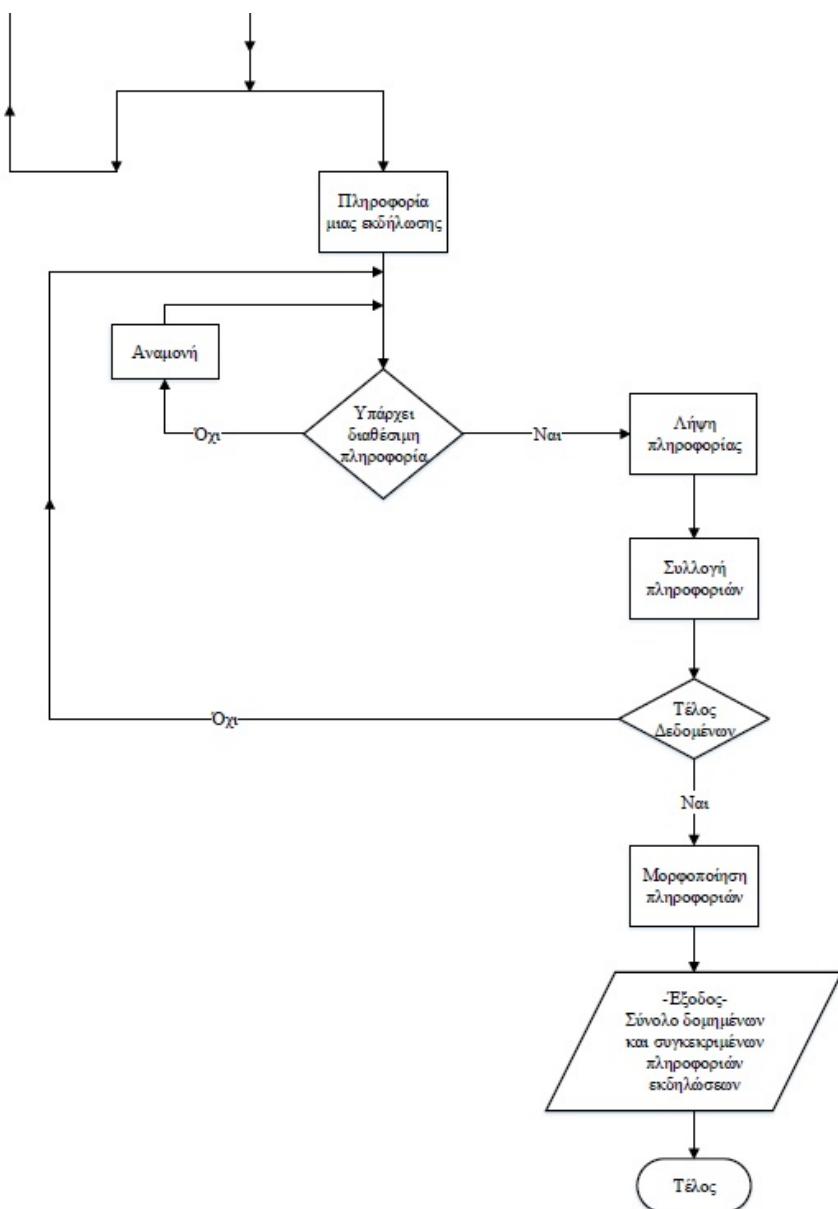

Εικόνα 2 : Ροή εργασίας εκδηλώσεων (μέρος1)

Εικόνα 3 : Ροή εργασίας εκδηλώσεων (μέρος2)

**Εικόνα 4 : Ροή εργασίας εκδηλώσεων (μέρος3)**

Εικόνα 5 : Ροή εργασίας εκδηλώσεων (μέρος4)

### **3.2.2 Σενάρια Χρήσης**

Οι εξαγώμενες πληροφορίες που προκύπτουν από την εφαρμογή της διπλωματικής εργασίας στο θέμα των γεγονότων-εκδηλώσεων είναι :

1. Εάν αυτή τη στιγμή σε συγκεκριμένους χώρους-κτίρια λαμβάνει χώρα κάποια εκδήλωση.
2. Ποιες εκδηλώσεις είναι προγραμματισμένες να πραγματοποιηθούν στους συγκεκριμένους χώρους-κτίρια σε οποιοδήποτε χρονικό διάστημα.
3. Ποιο είναι το ακριβές χρονικό διάστημα(έναρξη-λήξη) πραγματοποίησης της κάθε εκδήλωσης.
4. Ποιο είναι το είδος της εκδήλωσης λεπτομερώς.  
Σε ποια κατηγορία κατατάσσεται, δηλαδή με ποιο τομέα ασχολείται το θέμα της εκδήλωσης(πχ. τεχνολογία, μουσική, επιστήμη), σε τι υποκατηγορία συμπεριλαμβάνεται, όπου ορίζεται η ειδική κατεύθυνση του θέματος της εκδήλωσης και ποιος είναι ο τύπος, δηλαδή το είδος της παρουσίασης, της εκδήλωσης(διάσκεψη, σεμινάριο, συναυλία και άλλα).

Ουσιαστικά με αυτή την εφαρμογή πραγματοποιείται ενημέρωση γεγονότων-εκδηλώσεων, μια πληροφορία που μπορεί να έχει ποικίλες χρήσεις.

Η ενημέρωση των γεγονότων-εκδηλώσεων καθίσταται χρήσιμη για προσέλευση. Με βάση αυτήν, μπορούν οι συμμετέχοντες να επιλέγουν εκδηλώσεις που τους ενδιαφέρουν να τις παρακολουθήσουν, να παραμένουν ενημερωμένοι σχετικά με τις εξελίξεις στο θέμα των εκδηλώσεων και να μπορούν να οργανώνουν το προσωπικό τους πρόγραμμα.

Η πληροφορία αυτή μπορεί να χρησιμοποιηθεί από εφαρμογές που να ειδοποιούν τους ιδιοκτήτες των καταστημάτων της περιφέρειας, ώστε να αναμένουν προσέλευση κόσμου, ως ενημέρωση για εταιρείες marketing, που αποσκοπούν στην προώθηση προϊόντων, ή για επιχειρήσεις, ώστε να προβούν σε ενέργειες διαφήμισης.

Η χρήση της ενημέρωσης γεγονότων-εκδηλώσεων μπορεί να είναι ωφέλιμη είτε για μια εφαρμογή πλοήγησης(navigation app), που να προειδοποιεί για πιθανή αυξημένη κίνηση όσους κατευθύνονται προς εκείνη την περιοχή, είτε για μια εφαρμογή σχετικά με τους χώρους στάθμευσης στην περιοχή, που να προειδοποιεί σε περίπτωση εκδήλωσης για την κατάσταση μη εύρεσης ή της ύπαρξης ελαχίστων διαθέσιμων θέσεων στάθμευσης.

Ακόμα, η εφαρμογή μπορεί να λειτουργήσει ως μια μελλοντική εποπτεία της κατάστασης της περιοχής.

Μια τέτοια προειδοποιητική ματιά της περιοχής μπορεί να αφορά τη δημόσια ασφάλεια είτε πρόκειται για το γεγονός της συσσώρευσης κόσμου στην περιοχή είτε ανάλογα το είδος της εκδήλωσης, ενδεχομένως, να χρειάζεται περισσότερη προσοχή ένας αθλητικός αγώνας ή μία συναυλία σε σχέση με ένα επιστημονικό συνέδριο.

Η πληροφορία της διεξαγωγής εκδηλώσεων μπορεί να είναι χρήσιμη και για το σύστημα δημοσίων συγκοινωνιών, το οποίο ίσως να δρομολογήσει τις συγκοινωνίες σε πιο τακτά διαστήματα για την εξυπηρέτηση αυτής της μεγαλύτερης προσέλευσης κόσμου τις συγκεκριμένες ημέρες και ώρες(πριν-μετά) της εκδήλωσης.

Επίσης, αυτή η μεγάλη προσέλευση κόσμου και η κίνηση που μπορεί να προκύψει λόγω της εκδήλωσης μπορούν να επισημάνουν την αναγκαιότητα για λήψη αναγκαίων μέτρων για την ασφαλή κίνηση των τροχοφόρων και των πεζών(τροχονόμοι-Τροχαία).

Η μελλοντική επισκόπηση που η εφαρμογή παρέχει μπορεί να χρησιμεύσει ώστε να καθορισθεί ο προγραμματισμός της κλήσης άλλων πιο εξειδικευμένων εφαρμογών(IoT artefacts, Events, Services), που θα παράγουν μια πιο συγκεκριμένη και ειδική πληροφορία, χρήσιμη στους παραπάνω αλλά και σε άλλους τομείς, για τη συγκεκριμένη περιοχή και για τα χρονικά διαστήματα που αφορούν την εκδήλωση.

Με αποθήκευση των αποτελεσμάτων της εφαρμογής και με χρησιμοποίηση των πληροφοριών που αυτή προσφέρει μπορούν, επιπλέον, να πραγματοποιηθούν analytics, παράγοντας χρήσιμες πληροφορίες.

Μέσα από analytics που βασίζονται στο είδος των εκδηλώσεων μπορεί να προταθεί ένας συγκεκριμένος χώρος-κτίριο για τη διεξαγωγή κάποιου είδους ή τύπου εκδήλωσης με αξιοποίηση από εφαρμογές που προτείνουν χώρους-κτίρια για εκδηλώσεις(event managers, event management).

Από την εφαρμογή analytics, όπου πιθανόν να χρειάζεται να προηγηθεί ένας συνδυασμός με άλλες εφαρμογές, μπορούν να προκύψουν πληροφορίες που ίσως να ενδιαφέρουν το Δήμο της περιοχής στον οποίο ανήκει ο χώρος-κτίριο, όπως πληροφορίες σχετικά με τα είδη των εκδηλώσεων που ελκύουν περισσότερο κόσμο ή τα είδη των εκδηλώσεων που αυξάνουν την κινητικότητα στα καταστήματα της περιοχής, για μελλοντική διεξαγωγή περισσότερων τέτοιων εκδηλώσεων και εάν υπάρχει κάποιο κατάλληλο ωράριο ώστε να επωφελείται η περιοχή. Επιπροσθέτως, μια χρήσιμη πληροφορία μπορεί να είναι εάν υπάρχει κάποιο είδος εκδήλωσης που συνήθως διοργανώνεται ή επρόκειτο να διεξαχθεί μελλοντικά περισσότερο σε αυτό τον χώρο-κτίριο, ώστε να αναπτυχθεί η περιοχή με καταστήματα, επιχειρήσεις, καλλιτεχνικούς, πολιτισμικούς και περιβαλλοντικούς χώρους ή χώρους ψυχαγωγίας, που να ενδιαφέρουν και να ευχαριστούν τον κόσμο που έρχεται στην περιοχή για αυτό το είδος εκδηλώσεων με αποτέλεσμα να προτιμήσουν την περιοχή για κάποια επόμενη έξοδό τους.

Άλλη μία χρησιμότητα που μπορεί να προκύψει είναι μια εφαρμογή που βασίζεται σε μια συνδυαστική λειτουργία των δύο θεμάτων της διπλωματικής εργασίας. Μια τέτοια εφαρμογή μπορεί να είναι χρήσιμη σε ανθρώπους που θέλουν να παρευρεθούν σε μια εκδήλωση, αλλά, ενδεχομένως, η υγεία τους να επηρεάζεται από την κατάσταση του καιρού. Σε αυτή την περίπτωση, οι άνθρωποι αυτοί μπορούν να είναι εγγεγραμμένοι σε μια υπηρεσία, η οποία χρησιμοποιώντας αυτή την συνδυαστική λειτουργία να ελέγχει την κατάσταση του καιρού που θα επικρατεί σε χρονικό διάστημα που αφορά την εκδήλωση, στην οποία ο κάθε χρήστης επιθυμεί να παραστεί, και θα αποφασίζει εάν είναι κρίσιμη η κατάσταση, προειδοποιώντας, τότε, τον κάθε χρήστη ξεχωριστά.

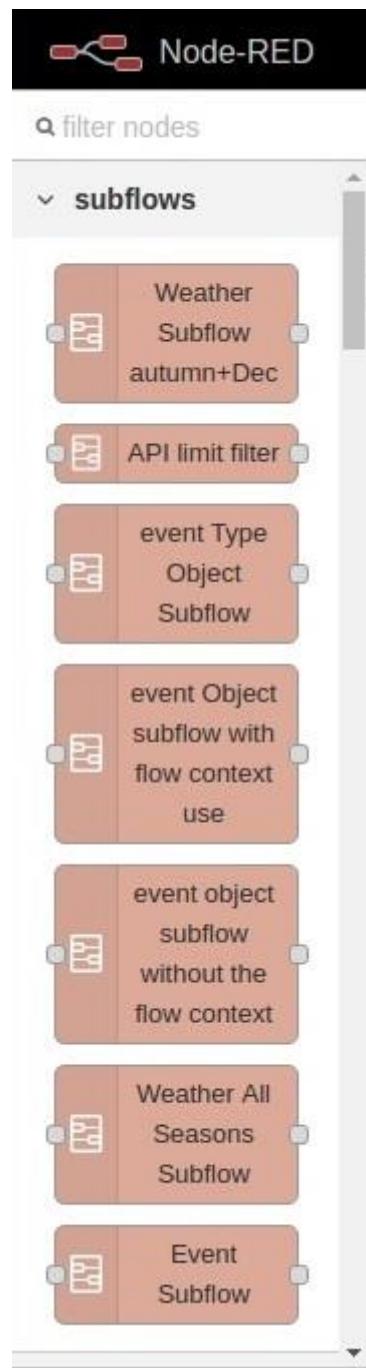

Συνεπώς, η εφαρμογή της διπλωματικής εργασίας στο θέμα των γεγονότων-εκδηλώσεων μπορεί να χρησιμοποιηθεί είτε για περαιτέρω ανάλυση, είτε για συνδυασμό με άλλες εφαρμογές ή να προσφέρει μια αφαιρετική πληροφορία, στην οποία μπορεί να βασιστεί η δημιουργία άλλων εφαρμογών που να κατευθύνουν την αξιοποίησή της σε διαφορετικά σενάρια χρήσης.

## **4.Υλοποίηση**

Τέλος, στο κεφάλαιο αυτό, γίνεται αναλυτική προσέγγιση της εκάστοτε επεξεργασίας των δεδομένων των συγκεκριμένων πηγών ανοιχτών δεδομένων, όπου επεξηγείται η κάθε εφαρμογή (4.1.1 και 4.2.1), παρουσιάζεται το αποτέλεσμα με κάποια γραφική προσομοίωση (4.1.2) και διατυπώνεται μια πιθανή συνδυαστική λογική αυτών των δύο αποτελεσμάτων (4.3) προκειμένου να προκύψει κάποιο άλλο ωφέλιμο αποτέλεσμα.

Κατά την υλοποίηση της διπλωματικής εργασίας πραγματοποιήθηκε η δημιουργία υπορροών(subflows)-κόμβων (βλ. Εικόνα 6 :

Υπορροές(subflows)) καθένας από τους οποίους επιτελεί μια ορισμένη λειτουργία και δεχόμενος κατάλληλη είσοδο μπορεί να χρησιμοποιηθεί για να παράγει μια συγκεκριμένη έξοδο.

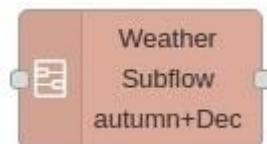

Εικόνα 6 : Υπορροές(subflows)

## 4.1 Καιρός

### 4.1.1 Ροές – υπορροές – κόμβοι

Αρχικά δημιουργήθηκε η υπορροή «Weather Subflow autumn+Dec».

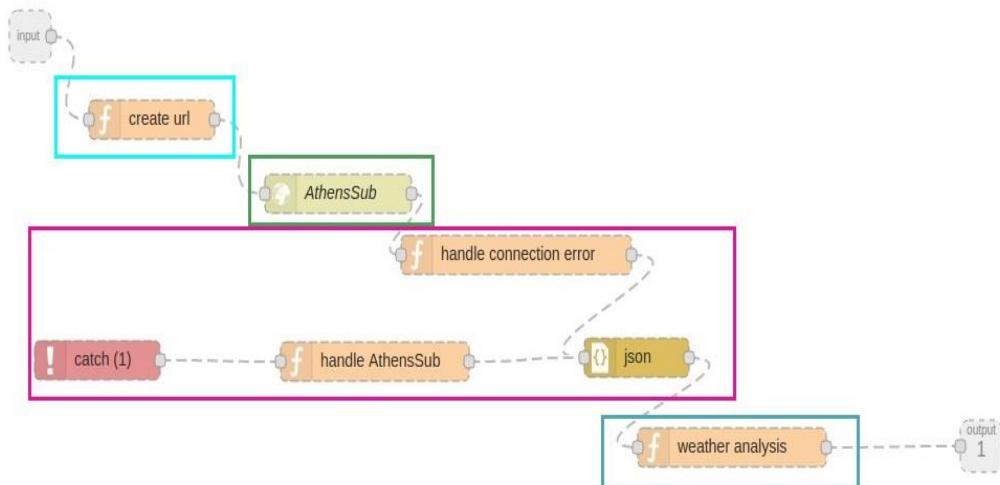

Εικόνα 7 : Κόμβος της υπορροής «Weather Subflow autumn+Dec»

Η υπορροή «Weather Subflow autumn+Dec» δέχεται ως είσοδο ένα εισερχόμενο μήνυμα που διαθέτει δηλωμένες τις παραμέτρους msg.time.year, msg.time.month, msg.time.day και παράγει ως έξοδο έναν πίνακα από ωριαία αντικέιμενα της μορφής

```
{  
    time:{  
        epoch : time,  
        date : dateStringLocal  
    },  
    hour : hour,  
    state : weatherState  
},
```

είτε έναν άδειο πίνακα.

Ο κόμβος αυτός αποτελείται από τη παρακάτω ροή.

**Εικόνα 8 : Ροή της υπορροής Weather Subflow autumn+Dec**

: Προετοιμασία κλήσης API.

Σε αυτό το πλαίσιο, ελέγχουμε την είσοδο των δεδομένων στην υπορροή(subflow), εάν, δηλαδή, έχουν οριστεί όλες οι ζητούμενες παράμετροι που χρειάζονται ώστε να μπορέσει να πραγματοποιηθεί η αίτηση στην υπηρεσία(API), δημιουργούμε το κατάλληλο URL και προετοιμάζουμε την αίτηση στην υπηρεσία, αφού φτιάξουμε το μήνυμα με τις απαραίτητες παραμέτρους.

: Κλήση API

Με αυτόν τον κόμβο καλείται η υπηρεσία API, ώστε να προσκομίσουμε τα δεδομένα που χρειάζονται.

: Χειρισμός σφαλμάτων

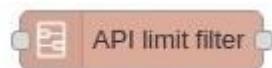

Με τους κόμβους αυτού του πλαισίου, χειριζόμαστε τα πιθανά σφάλματα του δικτύου, μερικά από αυτά συναντήθηκαν κατά τη διάρκεια της εργασίας, όπως “Error: connect ETIMEDOUT” και “Error getaddrinfo EAI AGAIN”, αλλά και οποιοδήποτε σφάλμα που μπορεί να προκύψει κατά την κλήση API επιστρέφοντας μια μη επιθυμητή έξοδο είτε σφάλμα που να διαταράσσει την ομαλή λειτουργία της ροής(flow). Κάθε τέτοια περίπτωση αναγνωρίζεται και χειρίζεται αναλόγως.

: Ανάλυση δεδομένων

Στον κόμβο αυτό αναλύονται τα δεδομένα του καιρού που λήφθηκαν από την υπηρεσία API, λαμβάνοντας υπόψιν τη μορφοποίησή τους, και παράγεται η προσδοκώμενη έξοδος.

Επόμενη υπορροή(subflow) είναι η «API limit filter».

**Εικόνα 9 : Κόμβος της υπορροής API limit filter**

Η υπορροή «API limit filter» δέχεται ως είσοδο ένα μήνυμα και η έξοδός της είναι το εισερχόμενο μήνυμα ή τίποτα.

Το περιεχόμενο αυτής της υπορροής(subflow) είναι μόνο ένας κόμβος στον οποίο λαμβάνεται υπόψη το όριο των αιτήσεων που επιτρέπει η πηγή «Dark Sky API», δηλαδή «1.000 αιτήσεις API προς την Υπηρεσία ανά ημέρα δωρεάν»<sup>[21]</sup>.

**Εικόνα 10 : Ροή της υπορροής API limit filter**

Με τη χρήση αυτής της υπορροής, στόχος είναι να μπορέσουμε να παραμείνουμε μέσα σε αυτό το όριο της συγκεκριμένης υπηρεσίας API.

Στο θέμα των καιρού μία ακόμα υπορροή(subflow) δημιουργήθηκε, η «Weather All Seasons Subflow».

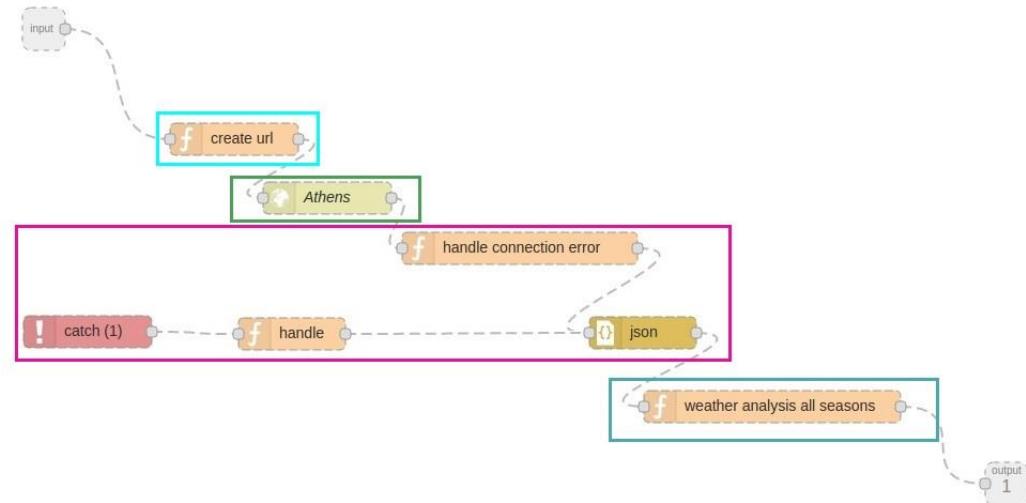

**Εικόνα 11 : Κόμβος της υπορροής Weather All Seasons Subflow**

Η υπορροή(subflow) «Weather All Seasons Subflow» συμπεριφέρεται ακριβώς όπως η υπορροή «Weather Subflow autumn+Dec». Ένα παράδειγμα της παραγόμενης εξόδου της υπορροής «Weather All Seasons Subflow» είναι το ακόλουθο.

```
[  
  {  
    "time":{  
      "epoch":1453327200,  
      "date":"1/21/2016, 12:00:00 AM"  
    },  
    "hour":0,  
    "state":"good"  
  },  
  {  
    "time":{  
      "epoch":1453330800,  
      "date":"1/21/2016, 1:00:00 AM"  
    },

: Χειρισμός σφαλμάτων

: Ανάλυση δεδομένων

Παρατηρούμε πως η ροή της «Weather All Seasons Subflow» είναι όμοια με τη ροή της υπορροής «Weather Subflow autumn+Dec». Το μόνο σημείο στο οποίο διαφέρει είναι ο κόμβος «weather analysis all seasons». Εκεί πραγματοποιείται η ανάλυση των δεδομένων του καιρού για όλες τις εποχές. Η ανάλυση αυτή είναι εμπνευσμένη και βασισμένη στα δημοσιοποιημένα δεδομένα του WeatherSpark<sup>[22]</sup> και παρουσιάζεται στους επόμενους πίνακες.

	Month	<	Normal	>
temperature °C	Sep	good until 16 °C else bad	19 – 28	good until 39 °C else bad
	Oct	bad	15-22	
	Nov		10-18

	Jul		5-9	
	Aug		5-9	

Πίνακας 5 : Ανάλυση καιρού Καλοκαίρι

Όλα τα παραπάνω συνθέτουν μια ροή που αναπαρίσταται στην Εικόνα 13.

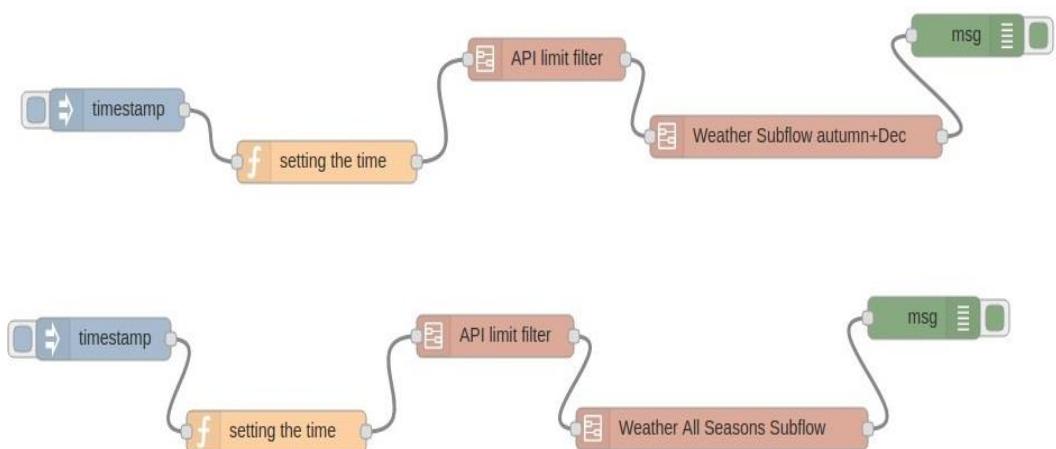

**Εικόνα 13 : Τελική ροή καιρού**

: Είσοδος υπορροής(subflow)

: Υπορροή(Subflow)

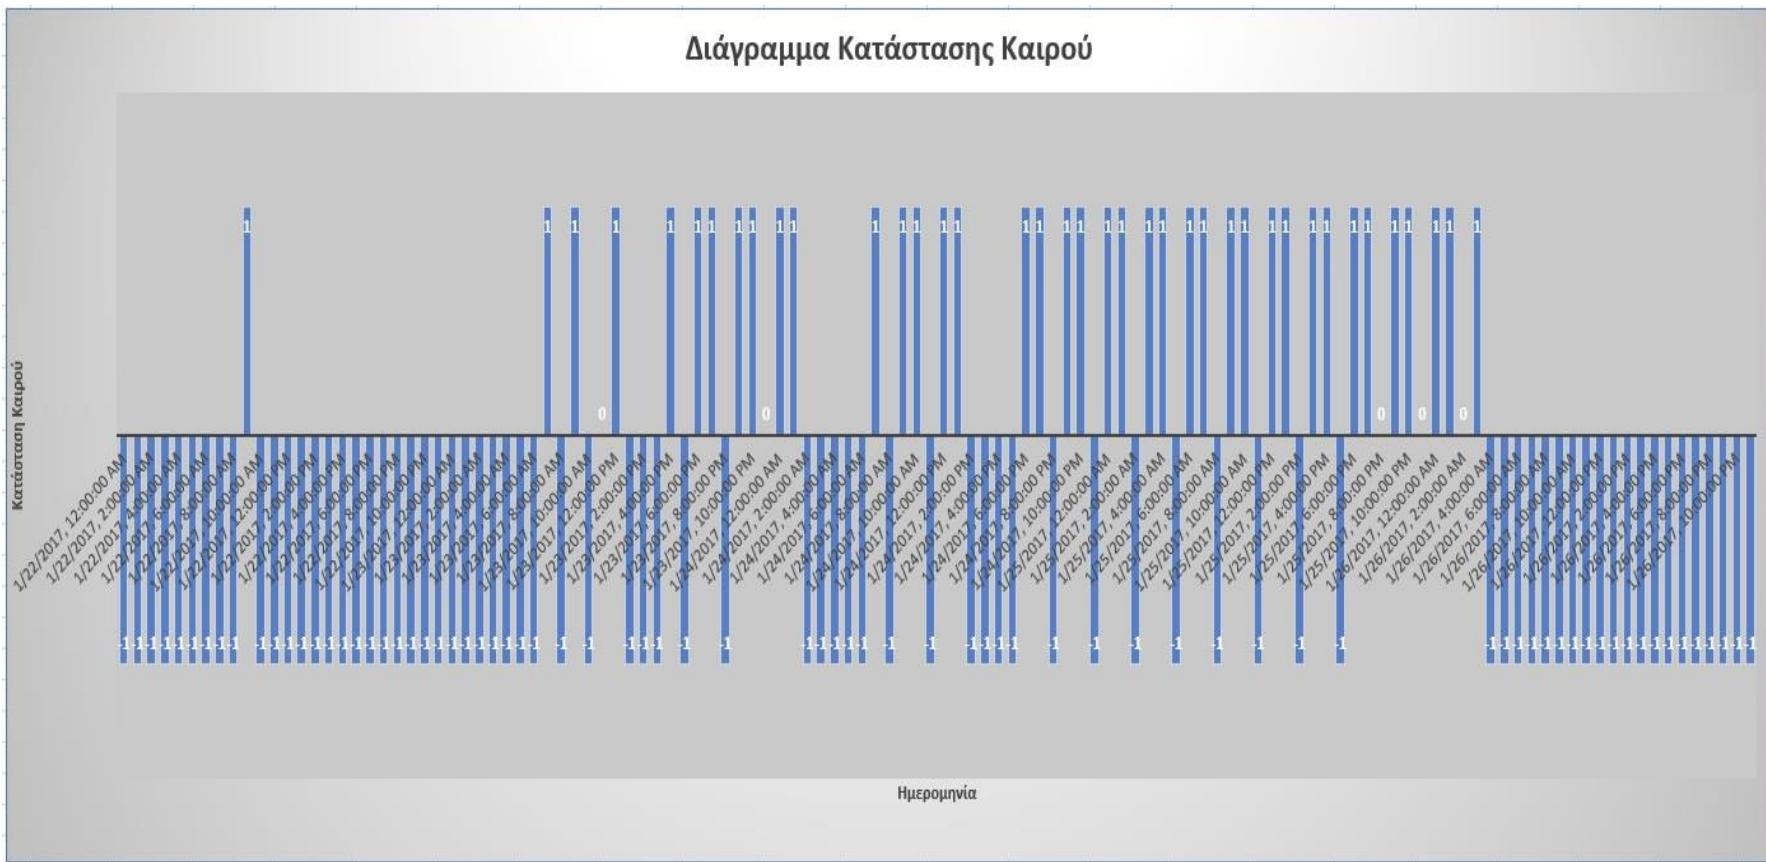

Αυτή η σύνθεση παρουσιάζεται και με τη χρήση πλέον της δομής των υπορροών(subflows).

**Εικόνα 14 : Σύνθεση ροής με χρήση των υπορροών(subflows) καιρού**

#### **4.1.2 Πείραμα – Γραφική Παράσταση**

Στο σημείο αυτό παρατίθεται μια γραφική παράσταση στην οποία προσομοιώνεται ένα πείραμα σε διάστημα πέντε ημερών που έχει βασιστεί στην υλοποίηση που αφορά το θέμα του καιρού. Στο «Διάγραμμα Κατάστασης Καιρού» (βλ. Εικόνα 15), είναι εμφανής η εναλλαγή της κατάστασης του καιρού στο διάστημα αυτό, όπου διακρίνονται οι υπάρχουσες διαφορετικές του καταστάσεις (good, normal, bad) στις αντίστοιχες τιμές (1, 0, -1).

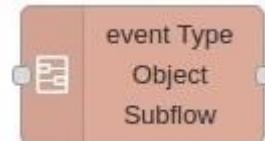

**Εικόνα 15 : Διάγραμμα κατάστασης καιρού**

## 4.2 Γεγονότα – Εκδηλώσεις

### 4.2.1 Ροές – υπορροές – κόμβοι

Έχοντας λάβει γνώση σχετικά με τη διαδικασία της εργασίας στο θέμα των γεγονότων–εκδηλώσεων (βλ. υποκεφάλαιο 3.2.1), μπορούμε να προχωρήσουμε στην επεξήγηση της υλοποίησης αυτού του θέματος με μία bottom-up προσέγγιση.

Το χαμηλότερο επίπεδο(lower-level) της εφαρμογής αποτελείται από την υπορροή «event Type Object Subflow».

Εικόνα 16 : Κόμβος της υπορροής «event Type Object Subflow»

Η υπορροή «event Type Object Subflow» δέχεται ως είσοδο ένα εισερχόμενο μήνυμα που διαθέτει δηλωμένες τις παραμέτρους msg.categoryId, msg.subcategoryId, msg.formatId είτε ως αριθμούς είτε ως null και δημιουργεί ένα αντικείμενο(object) εξόδου με πληροφορίες που αφορούν το είδος της εκδήλωσης έχοντας την εξής μορφή :

```
eventType:{  
    category : categoryName,  
    subcategory : subcategoryName,  
    format : formatName  
}
```

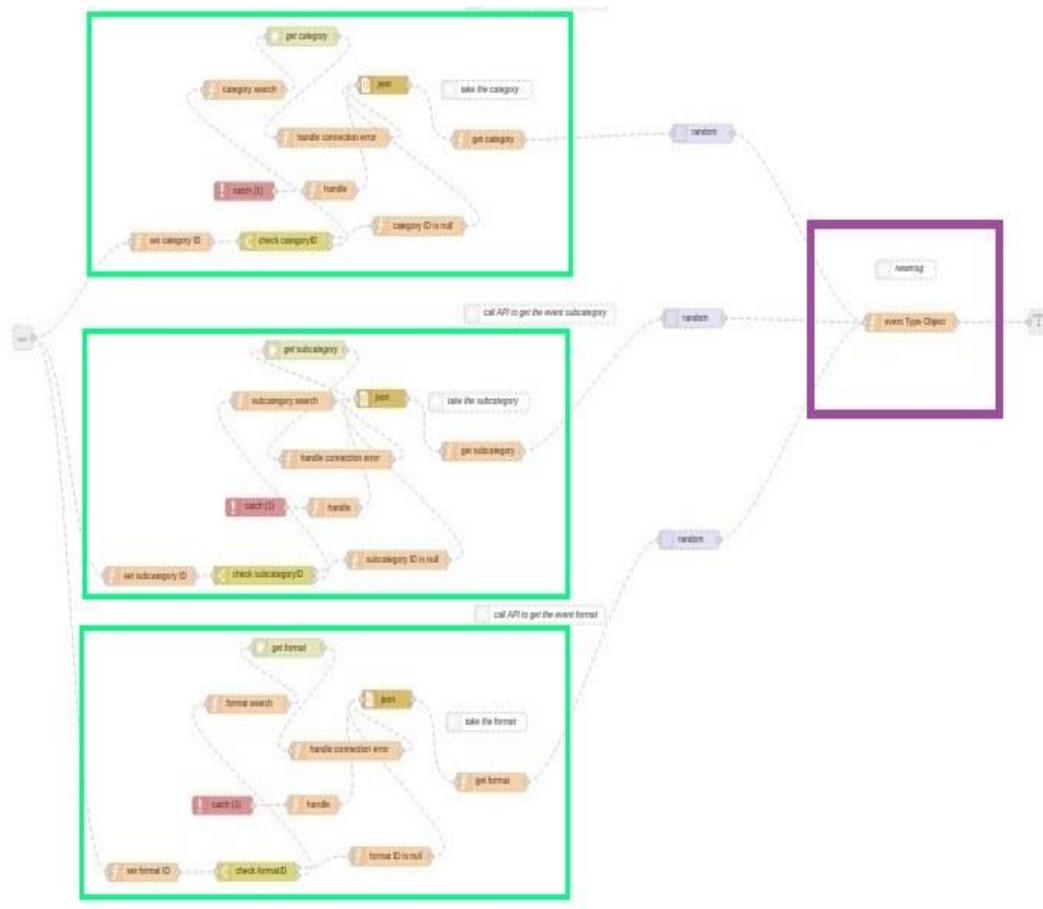

Ένα παράδειγμα συνήθης εξόδου αυτής της υπορροής είναι

```
{  
  "eventType":{  
    "category":"Health & Wellness",  
    "subcategory":"Medical",  
    "format":"Convention"  
  },  
},
```

ενώ σε ένα παράδειγμα ειδικής περίπτωσης, όπου όλες οι δηλωμένες παράμετροι είναι null, η έξοδος έχει την ακόλουθη μορφή :

```
{  
  "eventType":{  
    "category": "",  
    "subcategory": "",  
    "format": ""  
  },  
}.
```

Τα στοιχεία που απαρτίζουν την υπορροή «event Type Object Subflow» εμφανίζονται στην Εικόνα 17.

Εικόνα 17 : Ροή της υπορροής «event Type Object Subflow»

: Διεργασία

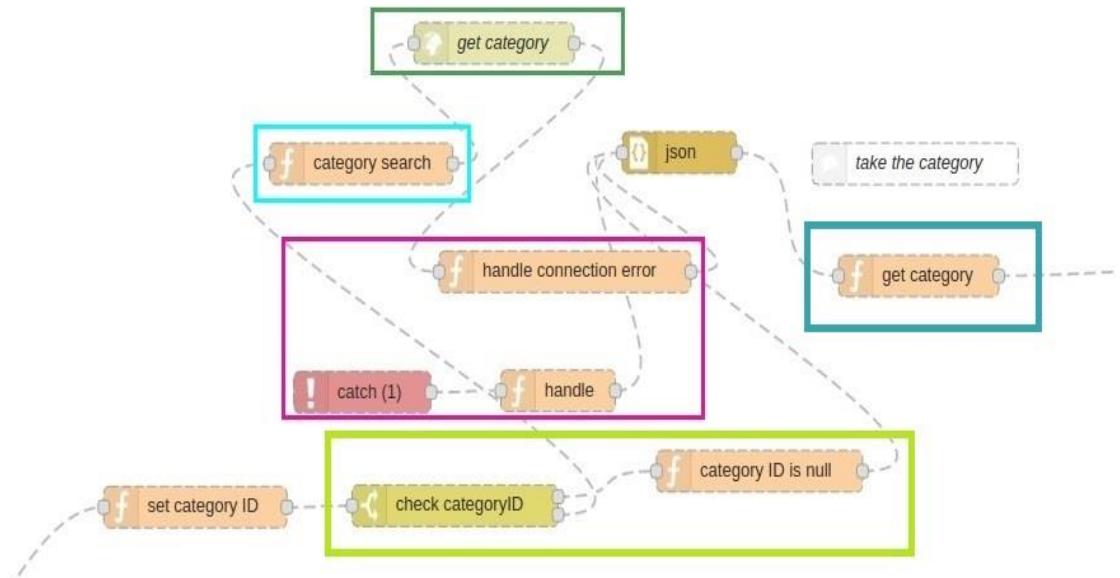

Παρατηρείται πως υφίστανται τρείς όμοιες διεργασίες οι οποίες εκτελούνται παράλληλα για την εξαγωγή πληροφοριών κατηγορίας, υποκατηγορίας και μορφής-τύπου της εκδήλωσης.

: Ένωση πληροφοριών

Σε αυτό το πλαίσιο εισέρχονται οι πληροφορίες που προέκυψαν από τις τρεις διεργασίες, ύστερα κατηγοριοποιούνται ανά θέμα και ενώνονται παράγοντας μια δομημένη πληροφορία για το είδος της εκδήλωσης ως έξοδο της υπορροής.

Ας εστιάσουμε σε μία από τις παράλληλες διεργασίες και στα μέρη από τα οποία αποτελείται.

Εικόνα 18 : Ροή διεργασίας (κατηγορία εκδήλωσης)

: Έλεγχος ειδικής περίπτωσης

Στο πλαίσιο αυτό, ελέγχεται το ενδεχόμενο κατά το οποίο στο αντικείμενο(object) που εξετάζεται, από τα δεδομένα που λήφθηκαν από την υπηρεσία API σχετικά με τις εκδηλώσεις, να είναι προαιρετικό το πεδίο για το οποίο ζητείται περαιτέρω πληροφορία. Σε μια τέτοια περίπτωση, η είσοδος στην υπορροή «event Type Object Subflow» θα έχει την τιμή null στο συγκεκριμένο πεδίο, οπότε δε θα μπορεί να πραγματοποιηθεί η επόμενη κλήση API. Έτσι, με το πλαίσιο αυτό, εξετάζεται εάν υπάρχει τέτοιο ζήτημα ώστε να χειρισθεί με ειδικό τρόπο.

: Προετοιμασία κλήσης API.

Σε αυτό το πλαίσιο, δημιουργούμε το κατάλληλο URL και προετοιμάζουμε την αίτηση στην υπηρεσία API αφού φτιάξουμε το μήνυμα με τις απαραίτητες παραμέτρους.

## Κλήση API

Με αυτόν τον κόμβο καλείται η υπηρεσία API, ώστε να προσκομίσουμε τα δεδομένα που χρειάζονται.

Ακολουθεί ένα παράδειγμα της απόκρισης της κλήσης API σχετικά με την κατηγορία μίας εκδήλωσης.

```
{  
    "resource_uri": "https://www.eventbriteapi.com/v3/categories/107/",  
    "id": "107",  
    "name": "Health & Wellness",  
    "name_localized": "Health & Wellness",  
    "short_name": "Health",  
    "short_name_localized": "Health",  
    "subcategories": [  
        {  
            "resource_uri": "https://www.eventbriteapi.com/v3/subcategories/7001/",  
            "id": "7001",  
            "name": "Personal health"  
        },  
        {  
            "resource_uri": "https://www.eventbriteapi.com/v3/subcategories/7002/",  
            "id": "7002",  
            "name": "Mental health"  
        },  
        {  
            "resource_uri": "https://www.eventbriteapi.com/v3/subcategories/7003/",  
            "id": "7003",  
            "name": "Medical"  
        },  
        {  
            "resource_uri": "https://www.eventbriteapi.com/v3/subcategories/7004/",  
            "id": "7004",  
            "name": "Spa"  
        },  
        {  
            "resource_uri": "https://www.eventbriteapi.com/v3/subcategories/7005/",  
            "id": "7005",  
            "name": "Yoga"  
        },  
        {  
            "resource_uri": "https://www.eventbriteapi.com/v3/subcategories/7999/",  
            "id": "7999",  
            "name": "Other"  
        }  
}
```

Η απόκριση της κλήσης για την υποκατηγορία μίας εκδήλωσης έχει την παρακάτω μορφή.

```
{  
  "resource_uri": "https://www.eventbriteapi.com/v3/subcategories/7003/",  
  "id": "7003",  
  "name": "Medical",  
  "parent_category": {  
    "resource_uri": "https://www.eventbriteapi.com/v3/categories/107/",  
    "id": "107",  
    "name": "Health & Wellness",  
    "name_localized": "Health & Wellness",  
    "short_name": "Health",  
    "short_name_localized": "Health"  
  }  
}
```

Παρατίθεται παράδειγμα για τη μορφή-τύπο μίας εκδήλωσης έτσι όπως προκύπτει από τη συγκεκριμένη κλήση API.

```
{  
  "resource_uri": "https://www.eventbriteapi.com/v3/formats/4/",  
  "id": "4",  
  "name": "Convention",  
  "name_localized": "Convention",  
  "short_name": "Convention",  
  "short_name_localized": "Convention"  
}
```

### Χειρισμός σφαλμάτων

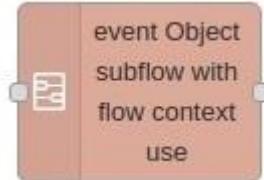

Με τους κόμβους αυτού του πλαισίου, χειριζόμαστε τα πιθανά σφάλματα του δικτύου, μερικά από αυτά συναντήθηκαν κατά τη διάρκεια της εργασίας, όπως “Error: connect ETIMEDOUT” και “Error getaddrinfo EAI AGAIN”, αλλά και οποιοδήποτε σφάλμα που μπορεί να προκύψει κατά την κλήση API επιστρέφοντας μια μη επιθυμητή έξοδο είτε σφάλμα που να διαταράσσει την ομαλή λειτουργία της ροής(flow). Κάθε τέτοια περίπτωση αναγνωρίζεται και χειρίζεται αναλόγως.

### Επεξεργασία δεδομένων

Στον κόμβο αυτό, εισέρχονται δεδομένα, που, είτε προέρχονται από την υπηρεσία API, είτε μετά από ειδικό χειρισμό ή χειρισμό σφάλματος. Επεξεργάζονται, στη συνέχεια, ανάλογα την περίπτωση με σκοπό να προκύψει η ζητούμενη πληροφορία για την οποία κλήθηκε για εκτέλεση η συγκεκριμένη διεργασία.

Στο επόμενο επίπεδο συναντάται η υπορροή «event Object subflow with flow context use» που χρησιμοποιεί και περιέχει την υπορροή «event Type Object Subflow», η οποία παρέχει τις υπηρεσίες της στην ανώτερή της χωρίς να αποκαλύπτει τον τρόπο που τις υλοποιεί.

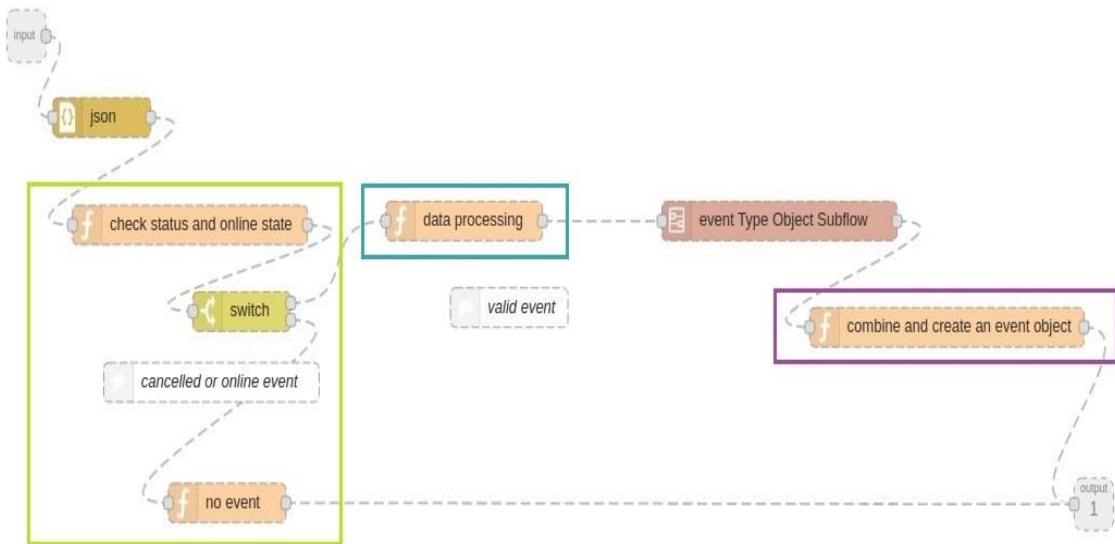

**Εικόνα 19 : Κόμβος της υπορροής «event Object subflow with flow context use»**

Στον κόμβο της υπορροής «event Object subflow with flow context use» εισέρχεται ένα μήνυμα το οποίο περιλαμβάνει μόνο ένα αντικείμενο(object) με τα δεδομένα μίας εκδήλωσης.

Η έξοδος της υπορροής «event Object subflow with flow context use» είναι ένα μήνυμα που περικλείει τις πληροφορίες της εκδήλωσης με τη μορφή του παρακάτω αντικειμένου.

```
eventObject : {  
    start : datetime,  
    end : datetime  
    eventType : {  
        category: string  
        subcategory: string  
        format : string  
    }  
}
```

Ο κόμβος αυτός αποτελείται από την παρακάτω ροή.

Εικόνα 20 : Ροή της υπορροής «event Object subflow with flow context use»

: Έλεγχος ειδικής περίπτωσης

Στο πλαίσιο αυτό γίνεται έλεγχος εάν το γεγονός-εκδήλωση όντως διεξάγεται στο επιλεγμένο κτίριο-χώρο, δηλαδή δεν είναι διαδικτυακή εκδήλωση (online\_event πεδίο) και ότι σίγουρα θα πραγματοποιηθεί όπως είχε προγραμματιστεί (status πεδίο). Διαφορετικά χειρίζεται ως ειδική περίπτωση.

: Επεξεργασία δεδομένων

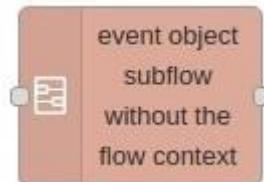

Σε αυτό τον κόμβο επεξεργάζονται τα δεδομένα της εκδήλωσης. Διατηρούνται τα χρονικά δεδομένα της εκδήλωσης σε μια δομή (flow context), η οποία είναι προσπελάσιμη μόνο από τους κόμβους της συγκεκριμένης υπορροής, καθορίζονται τα στοιχεία του είδους της εκδήλωσης είτε προέρχονται από υπάρχοντα είτε από προαιρετικά πεδία και διαμορφώνεται η κατάλληλη είσοδος για την επερχόμενη κλήση της υπορροής «event Type Object Subflow».

### : Ένωση πληροφοριών

Ο κόμβος αυτού του πλαισίου δέχεται ως είσοδο το αποτέλεσμα της κλήσης του κόμβου «event Type Object Subflow» σχετικά με την πληροφορία για το είδος της εκδήλωσης και λαμβάνει από τη δομή αποθήκευσης(flow context) της υπορροής τις χρονικές πληροφορίες της συγκεκριμένης εκδήλωσης ώστε να τις ενώσει με το εν λόγω αποτέλεσμα και να προκύψει η ζητούμενη έξοδος της υπορροής.

Η ίδια λειτουργικότητα υλοποιήθηκε με μία διαφορετική τεχνική στην υπορροή «event object subflow without the flow context». Η συγκεκριμένη υπορροή είναι αυτή που χρησιμοποιήθηκε τελικά σε αυτό επίπεδο υλοποίησης και περιέχει, επίσης, στη ροή της τον κόμβο της υπορροής «event Type Object Subflow».

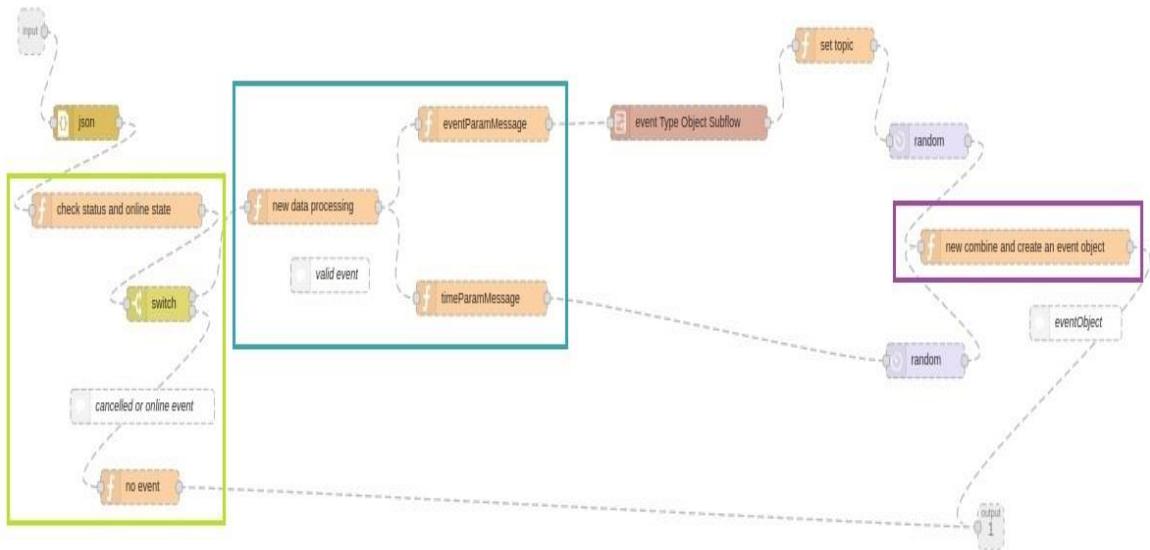

**Εικόνα 21 : Κόμβος της υπορροής «event object subflow without the flow context»**

Η υπορροή «event object subflow without the flow context» συμπεριφέρεται ακριβώς όπως η υπορροή «event Object subflow with flow context use». Ένα παράδειγμα της εξόδου της υπορροής «event object subflow without the flow context» είναι το ακόλουθο.

```
{
  "eventObject": {
    "ID": "30218431141",
    "start": {
      "timezone": "Europe/Athens",
      "local": "2017-03-03T08:30:00",
      "utc": "2017-03-03T06:30:00Z"
    },
    "end": {
      "timezone": "Europe/Athens",
      "local": "2017-03-05T14:30:00",
      "utc": "2017-03-05T12:30:00Z"
    },
    "eventType": {
      "category": "Health & Wellness",
      "subcategory": "Medical",
      "format": "Convention"
    }
  }
}
```

Το περιεχόμενο αυτής της υπορροής απεικονίζεται στην επόμενη εικόνα (βλ. Εικόνα 22).

Εικόνα 22 : Ροή της υπορροής «event object subflow without the flow context»

: Έλεγχος ειδικής περίπτωσης

: Επεξεργασία δεδομένων

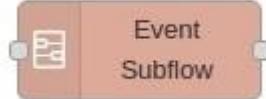

Πραγματοποιείται και εδώ επεξεργασία των δεδομένων του γεγονότος-εκδήλωσης, με την εστίαση στα χρονικά στοιχεία και στα στοιχεία είδους της εκδήλωσης, με τη διαφορά πως δε χρησιμοποιείται καμία δομή αποθήκευσης δεδομένων, αλλά και οι δύο ομάδες στοιχείων μορφοποιούνται ως ξεχωριστοί παράμετροι ενός εξερχόμενου μηνύματος. Με αυτό τον τρόπο μπορούν, έπειτα, εύκολα να διαχωρισθούν και να χρησιμοποιηθεί, στη συνέχεια, για διαφορετική λειτουργία η κάθε μία.

: Ένωση πληροφοριών

Με τον κόμβο αυτού του πλαισίου επιτυγχάνεται η ένωση των πληροφοριών χρόνου και είδους της εκδήλωσης που προέρχονται από δύο διαφορετικούς προορισμούς και η οργάνωσή τους σε ένα ενιαίο αντικείμενο(object) εξόδου.

Το ανώτερο επίπεδο(upper-level) της εφαρμογής περιλαμβάνει την υπορροή «Event Subflow», στην οποία εμπεριέχεται η υπορροή «event object subflow without the flow context», η οποία περικλείει την υπορροή «event Type Object Subflow».

**Εικόνα 23 : Κόμβος της υπορροής «Event Subflow»**

Η υπορροή «Event Subflow» δέχεται ως είσοδο ένα μήνυμα της μορφής

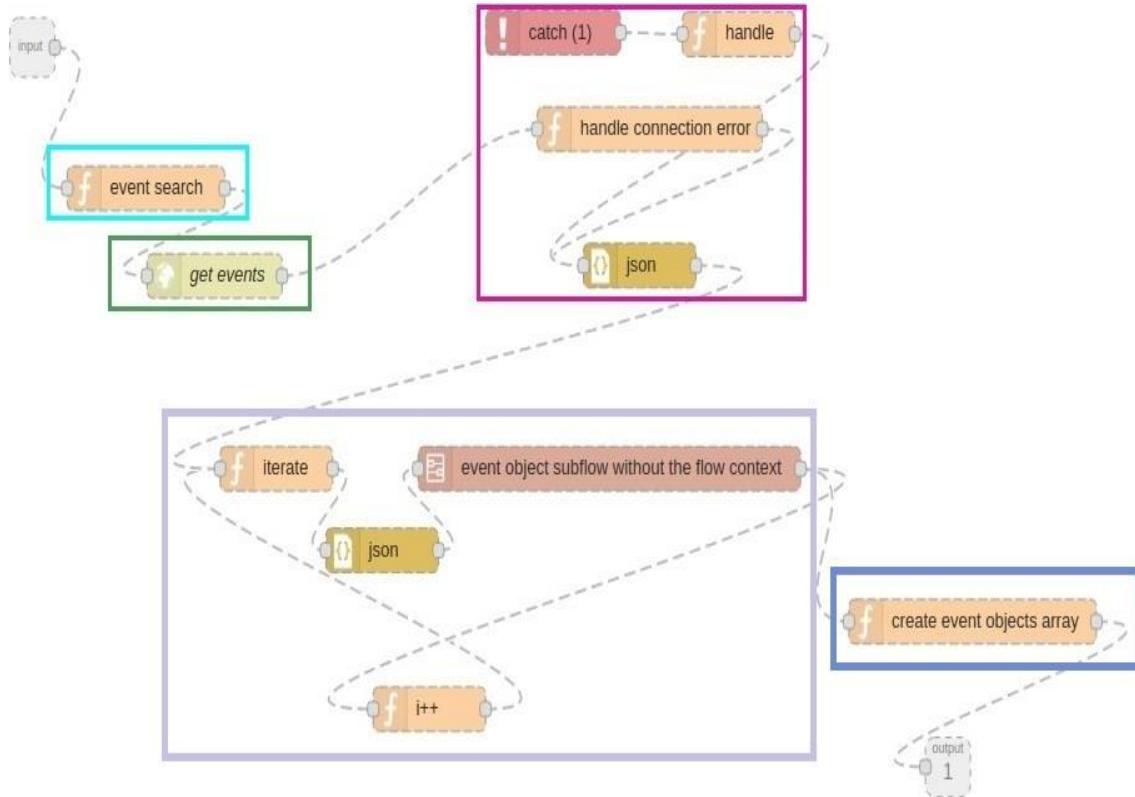

```
msg = {
    time: {
        startYear : startYear,
        startMonth : startMonth,
        startDay : startDay,
        startHour : startHour,
        endYear : endYear,
        endMonth : endMonth,
        endDay : endDay,
        endHour : endHour
    },
    venue: {
        direction : direction
    }
},
```

στο οποίο δηλώνονται επακριβώς οι παράμετροι του χρονικού διαστήματος της αίτησης, καθώς και η παράμετρος direction με την οποία επιλέγεται ο χώρος ή το κτίριο διεξαγωγής των εκδηλώσεων. Αυτό επιτυγχάνεται με τη δήλωση της κατεύθυνσης Βόρεια,Κέντρο ή Νότια (North,Center,South) με τις τιμές N,C ή S για την επιλογή του σταδίου «Κεντρικό Ολυμπιακό Στάδιο» (Main Olympic Stadium), του χώρου-κτιρίου του Ζαππείου (Zappeion) ή του Σταδίου Ειρήνης και Φιλίας (Peace And Friendship Stadium) αντίστοιχα.

Ως έξοδο παράγει έναν πίνακα με αντικείμενα της μορφής:

```
{  
    ID : id  
    start : startDatetime,  
    end : endDatetime,  
    eventType :{  
        category : categoryName,  
        subcategory : subcategoryName,  
        format : formatName  
    }  
}
```

Τα συστατικά που συγκροτούν την υπορροή «Event Subflow» παρουσιάζονται στην παρακάτω εικόνα.

**Εικόνα 24 : Ροή της υπορροής «Event Subflow»**

: Προετοιμασία κλήσης API.

Σε αυτό το πλαίσιο, ελέγχεται η είσοδος των δεδομένων στην υπορροή(subflow), εάν δηλαδή έχουν οριστεί όλες οι ζητούμενες παράμετροι που χρειάζονται ώστε να μπορέσει να πραγματοποιηθεί η αίτηση στην υπηρεσία(API), επιλέγονται οι κατάλληλες συντεταγμένες για το περίγραμμα γεωγραφικών συντεταγμένων(geographic bounding box-viewport) της αίτησης με βάση την προτίμηση του χώρου-κτιρίου, δημιουργείται το κατάλληλο URL και προετοιμάζεται η αίτηση στην υπηρεσία αφού φτιαχθεί το μήνυμα με τις απαραίτητες παραμέτρους.

: Κλήση API

Με αυτόν τον κόμβο καλείται η υπηρεσία API, ώστε να προσκομίσουμε τα δεδομένα που χρειάζονται.

Η απόκριση αυτής της κλήσης εμπεριέχει έναν πίνακα από αντικείμενα(objects) της ακόλουθης μορφής, όπου τα επισημασμένα σημεία δικαιολογούν την αναγκαιότητα της δημιουργίας και χρήσης της υπορροής «event Type Object Subflow».

: Χειρισμός σφαλμάτων

: Επαναληπτική διεργασία

Στο πλαίσιο αυτό, υλοποιείται μια τεχνική που βασίζεται στην επαναληπτική κλήση της υπορροής «event object subflow without the flow context» έως ότου εξετασθούν όλα τα αποθηκευμένα δεδομένα.

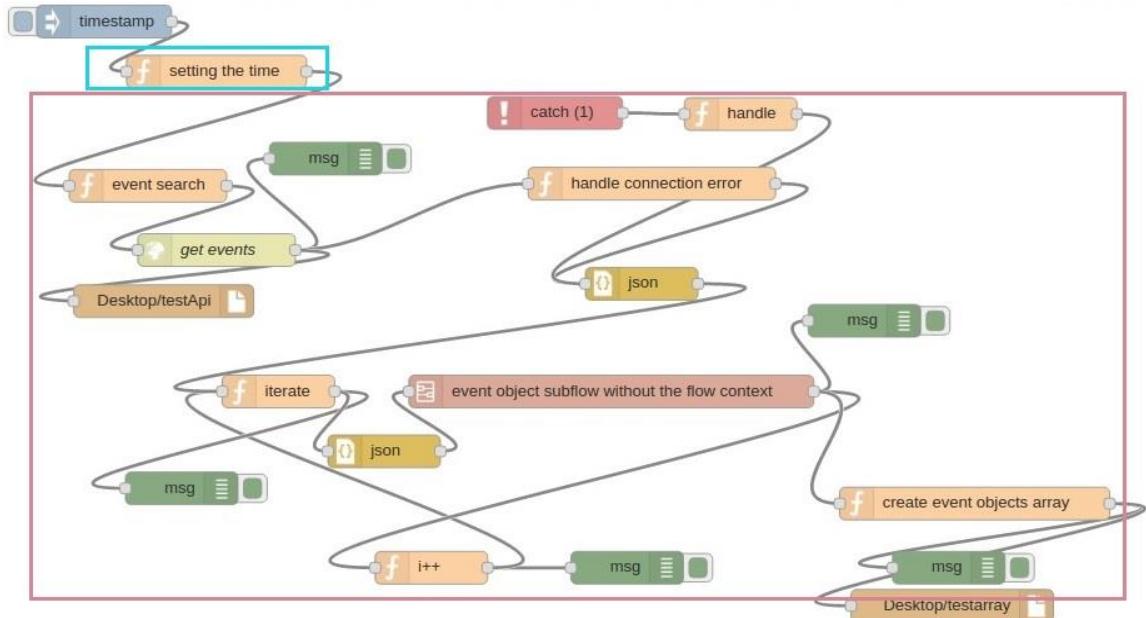

Η ιδιαιτερότητα αυτής της τεχνικής έγκειται στο γεγονός ότι κάθε επόμενη κλήση του κόμβου της υπορροής «event object subflow without the flow context» πραγματοποιείται μόνο όταν έχει τελειώσει η διαδικασία αυτής της υπορροής από την προηγούμενη κλήση. Μόλις ο συγκεκριμένος κόμβος παράγει την έξοδο της προηγούμενης κλήσης, αυξάνεται ο μετρητής και τότε καλείται ξανά η υπορροή «event object subflow without the flow context» για την επόμενη ομάδα δεδομένων, δηλαδή για την επόμενη εκδήλωση.

: Συλλογή και μορφοποίηση

Ο κόμβος αυτός δέχεται τις πληροφορίες που αποδίδονται διαδοχικά από την κάθε κλήση της υπορροής «event object subflow without the flow context», τις συλλέγει σε μια δομή και όταν εξετασθούν όλα τα δεδομένα που λήφθηκαν από την υπηρεσία API, τότε τις μορφοποιεί με αποτέλεσμα να παραχθεί η τελική έξοδος.

Σε αυτό το μοντέλο ένθετης-φωλιασμένης αρχιτεκτονικής(nested model architecture) που εφαρμόσθηκε, παρατηρούμε πώς τα στοιχεία, σε κάθε επίπεδο υλοποίησης, συνδέονται μεταξύ τους δομώντας μεγαλύτερες υπορροές εως ότου σχηματιθεί ένα πλήρες και ολικό ανώτατο επίπεδο. Το ανώτατο αυτό επίπεδο υλοποίησης μπορεί, στη συνέχεια, να χρησιμοποιηθεί ως μέρος ενός συνόλου μιας τελικής ροής, όπως απεικονίζεται στην Εικόνα 25.

Εικόνα 25 : Τελική ροή γεγονότων-εκδηλώσεων

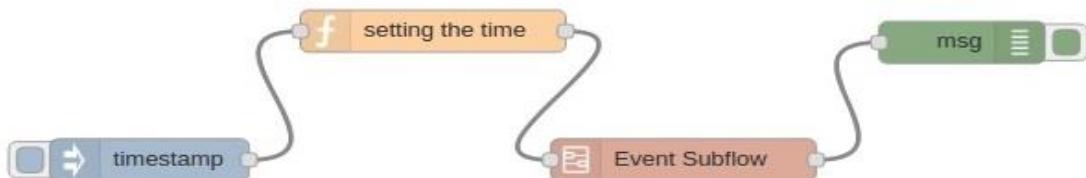

: Είσοδος υπορροής(subflow)

: Υπορροή(Subflow)

Η ένθετη αυτή υλοποίηση μπορεί να τεθεί σε λειτουργία αξιοποιώντας τη δυνατότητα χρήσης της δομής της υπορροής(subflow), πιο συκεκριμένα της τελικής υπορροής «Event Subflow».

Εικόνα 26 : Σύνθεση ροής με χρήση της υπορροής «Event Subflow»

Συμπληρώνουμε την έως τώρα επεξήγηση παραθέτοντας τη σχεδίαση της υλοποίησης σε μια συνοπτική εικόνα (βλ. Εικόνα 27), όπου γίνεται καλύτερα αντιληπτή η σύνδεση των υπορροών και εμφανίζονται πιο ξεκάθαρα τα βήματα που ακολουθήθηκαν σε μια top-down παρουσίαση.

**Εικόνα 27 : Σχεδίαση υλοποίησης στο θέμα των γεγονότων-εκδηλώσεων**

Στην παρουσίαση αυτή διακρίνεται η αλληλουχία κλήσης των υπορροών(subflows) και η μεταξύ τους εξάρτηση, καθώς και η ακολουθία των ενεργειών της κάθε υπορροής, με τη μόνη επισήμανση πως στο επίπεδο υλοποίησης της υπορροής «event object subflow» στην «event Object subflow with flow context use» τα βήματα 3b και 3c γίνονται σειριακά, ενώ στην «event object subflow without the flow context» πραγματοποιείται παράλληλη εκτέλεση των ενεργειών αυτών(3b και 3c).

Συμπερασματικά, με αυτόν τον τρόπο ολοκληρώθηκε και η ανάλυση της εφαρμογής της διπλωματικής εργασίας στο θέμα των γεγονότων-εκδηλώσεων.

### 4.3 Ειδοποιήσεις και Συνδυαστική λογική

Μία πιθανή υλοποίηση της συνδυαστικής λογικής των δύο θεμάτων της διπλωματικής εργασίας μπορεί να είναι:

Κάθε ημέρα να γίνεται έλεγχος για διαθέσιμα γεγονότα-εκδηλώσεις σε κάθε χώρο-κτίριο(κλήση υπορροής «Event Subflow»). Παράλληλα να καλείται η υπορροή(subflow) του καιρού «Weather All Seasons Subflow», ώστε να έχουμε την ωριαία κατάσταση καιρού της ημέρας. Έπειτα, για κάθε εκδήλωση να καθορίζονται οι ώρες προς εξέταση, όπως οι ώρες της εκδήλωσης και ίσως δύο ώρες πριν την έναρξη και δύο ώρες μετά τη λήξη, να διαχωρίζονται αυτές οι ώρες από το αρχείο καιρού και να ελέγχεται εάν υπάρχει ανάγκη ειδοποίησης για αυτές τις ώρες με βάση κάποια λογική(πχ. μια αυστηρή λογική είναι ότι εάν υπάρχει έστω και μία ώρα με κατάσταση bad τότε ειδοποίηση).

Όμως κάποια γεγονότα-εκδηλώσεις διαρκούν μέρες ή θέλουμε προειδοποίηση νωρίτερα.

Σε αυτήν την περίπτωση, μπορούμε να καλούμε την υπορροή(subflow) των εκδηλώσεων «Event Subflow», το αποτέλεσμα να το αποθηκεύουμε σε μία βάση δεδομένων, την οποία συνεχώς να την ενημερώνουμε για την ύπαρξη καινούργιων εκδηλώσεων ή εάν ακυρώθηκαν κάποιες από τις ήδη υπάρχουσες(έλεγχος εάν όντως ισχύουν, με βάση το id και το datetime επειδή εάν ακυρώθηκαν δε θα εμφανίζονται στη έξοδο) με επαναληπτική κλήση της «Event Subflow», να ταξινομούμε χρονικά τα δεδομένα της βάσης δεδομένων, δηλαδή τις εκδηλώσεις (πχ. με βάση το start datetime) και να παίρνουμε τις πιο πρόσφατες.

Έπειτα, για κάθε εκδήλωση ξεχωριστά:

Εάν η εκδήλωση διαρκεί ώρες σε μία ημέρα, τότε είτε να ελέγχουμε εάν το αρχείο κατάστασης του καιρού για τη συγκεκριμένη ημέρα υπάρχει και να το αντλούμε, αλλιώς να καλούμε την υπορροή(subflow) του καιρού και να αποθηκεύουμε το αποτέλεσμα, είτε εάν δεν είναι αποδοτικό, ανάλογα την εφαρμογή, να πραγματοποιείται κατευθείαν κλήση της υπορροής(subflow) του καιρού ώστε να λάβουμε το αρχείο κατάστασης καιρού της ζητούμενης ημέρας. Στη συνέχεια, με την παραπάνω παρόμοια λογική, να να καθορίζονται οι ώρες προς εξέταση, όπως οι ώρες της εκδήλωσης και ίσως δύο ώρες πριν την έναρξη και δύο ώρες μετά τη λήξη, να διαχωρίζονται αυτές οι ώρες από το αρχείο καιρού και να ελέγχεται εάν υπάρχει ανάγκη ειδοποίησης για αυτές τις ώρες με βάση κάποια λογική.

Αλλά, εάν η εκδήλωση διαρκεί ημέρες, τότε :

Να καθορίζονται οι ημέρες της εκδήλωσης.

Έπειτα, να καθορίζονται οι ακριβείς ώρες της εκδήλωσης για την κάθε ημέρα.

Στη συνέχεια, για κάθε ημέρα

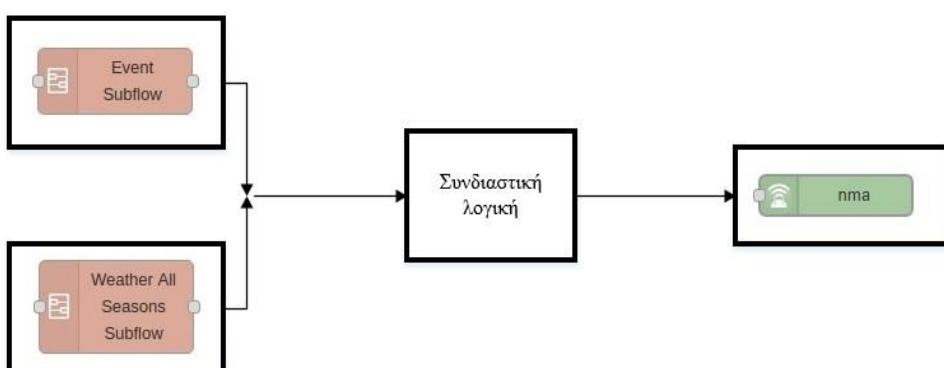

Να καλείται η υπορροή(subflow) του καιρού ή να αντλείται το υπάρχον αρχείο κατάστασης καιρού της ζητούμενης ημέρας, να διαχωρίζονται οι ώρες της εκδήλωσης από το αρχείο καιρού και αφού έλεγχθεί η κατάσταση του καιρού της ημέρας για τις παραπάνω ώρες, να αποφασίζεται εάν υπάρχει ανάγκη ειδοποίησης με βάση κάποια λογική.

Αποθήκευση, για κάθε ημέρα, αυτής της απόφασης.

Συνολικό αποτέλεσμα για την εκδήλωση.

Μπορεί όταν επιλέγεται ο χώρος-κτίριο διεξαγωγής της εκδήλωσης στην είσοδο, παράλληλα να καθορίζεται, κάπως, εάν πρόκειται για ανοιχτό ή κλειστό χώρο και με βάση αυτό, όταν χρειάζεται, να κατευθύνεται ο έλεγχος σε συγκεκριμένες ώρες, δηλαδή εάν είναι κλειστός ο χώρος, ο έλεγχος να περιορίζεται στις ώρες της έναρξης και δύο ώρες πριν και στις ώρες της λήξης και δύο ώρες μετά και κατά τη διάρκεια να μην πραγματοποιείται έλεγχος της κατάστασης του καιρού, σε περίπτωση που η εκδήλωση διαρκεί πολλές ώρες.

Έπειτα, αφού έχουν καθορισθεί για ποιες εκδηλώσεις υπάρχει ανάγκη ειδοποίησης, τότε για κάθε τέτοια εκδήλωση να γίνεται εύρεση των εγγεγραμένων στην εφαρμογή και με τη χρήση μιας κατάλληλης πλατφόρμας-platform(πχ. Notify My Android(NMA)) να ειδοποιούνται.

Εικόνα 28 : Συνδιαστική λογική και ειδοποιήσεις

## 5.Επίλογος

Μέσα από αυτή τη διπλωματική εργασία επιχειρήθηκε γνωριμία με έναν από τους αναπτυσσόμενους τομείς της τεχνολογίας και της επιστήμης, συγκεκριμένα με το Διαδίκτυο των Πραγμάτων.

Έγινε ενασχόληση με το αντικείμενο μέσα από μελέτη, έρευνα και εφαρμογή. Μελετήθηκαν οι έννοιες που συγκροτούν το γνωστικό αυτό πεδίο, πραγματοποιήθηκε έρευνα βιβλιογραφική και εφαρμόσθηκε η λογική που υποστηρίζεται από το πλαίσιο των τεχνολογιών του Διαδικτύου των Πραγμάτων. Με την μελέτη έγινε θεωρητική ένταξη στο Διαδίκτυο των Πραγμάτων και στη συνέχεια με την έρευνα και την εφαρμογή προσεγγίσθηκε το αντικείμενο αυτό τόσο βιβλιογραφικά, όπου έγινε συνειδητοποίηση της ύπαρξης τεραστίου όγκου Ανοιχτών Δεδομένων μέσω των διαφορετικών μορφοποιήσεων τους και των διαφόρων πρωτοκόλλων πρόσβασης σε αυτά, όσο και σε επίπεδο σχεδίασης και υλοποίησης εφαρμογών αξιοποίησής τους. Εκεί με την εκμάθηση και την χρήση κατάλληλων προγραμματιστικών εργαλείων τέθηκαν σε εφαρμογή τα στάδια που απαρτίζουν την αφαιρετική λογική, έτσι όπως αυτή διαμορφώνεται από τις τεχνολογίες του Διαδικτύου των Πραγμάτων. Η διπλωματική, λοιπόν, εργασία ασχολήθηκε με το αντικείμενο αυτό σε θεωρητικό, σε ερευνητικό και σε πρακτικό επίπεδο.

Συμπερασματικά, κατά την εκπόνηση της παρούσας διπλωματικής εργασίας επιτεύχθηκε ουσιαστική κατανόηση, έως ένα βαθμό, του Διαδικτύου των Πραγμάτων, έναν τομέα, οι τεχνολογίες του οποίου συνεχώς εξελίσσονται, απασχολεί ως αντικείμενο όλο και περισσότερο την επιστημονική έρευνα, την τεχνολογική πρόοδο και οι εφαρμογές και τα αποτελέσματά του αποδεικνύονται χρήσιμα σε πολλούς τομείς στο σύγχρονο τρόπο ζωής.

## 7.Παράρτημα Α

Πληροφορίες σχετικά με την έρευνα πηγών

- Ο τελευταίος έλεγχος εγκυρότητας των συνδέσμων των πηγών Ανοιχτών Δεδομένων, που παρουσιάζονται στον Πίνακα 1, πραγματοποιήθηκε στις 25 Ιανουαρίου 2017.
- Το πρωτόκολλο RSS αναγνωρίζεται συνήθως από το χαρακτηριστικό του εικονίδιο .
- Το πρωτόκολλο REST συναντήθηκε με τους όρους:
  - REST Architectural Style
  - REST protocol
  - RESTful web service
  - RESTful interface
  - RESTful API(application programming interface)
- Επεξήγηση στοιχείων από τον πίνακα πηγών Ανοιχτών Δεδομένων(Πίνακας 1) :
  - **general !!!**  
πρόκειται για έναν σύνδεσμο που σε κατευθύνει σε μια ιστοσελίδα, η οποία εμπεριέχει πολύ περισσότερες πηγές Ανοιχτών Δεδομένων, κυρίως με τη μορφή συνδέσμων(links).
  - **general !**  
μια πηγή Ανοιχτών Δεδομένων που περιέχει πολλά διαφορετικά είδη, κατηγορίες ή θέματα Ανοιχτών Δεδομένων που αφορούν μία πόλη ή μία χώρα.
  - **general ?**  
μία πηγή Ανοιχτών Δεδομένων που διαθέτει περαιτέρω συνδέσμους για Ανοιχτά Δεδομένα αλλά δεν είναι σίγουρο εάν τα δεδομένα αυτά βρίσκονται στο ζητούμενο μορφότυπο ή αν μπορούν να αντληθούν με κάποιο τρόπο από τα συγκεκριμένα εργαλεία που χρησιμοποιούνται στη διπλωματική εργασία.

## **8.Παράρτημα Β**

Κατά την εκπόνηση της διπλωματικής εργασίας σε επίπεδο υλοποίησης χρησιμοποιήθηκαν κάποια προγραμματιστικά εργαλεία.

Πιο συγκεκριμένα, το επίπεδο υλοποίησης της διπλωματικής εργασίας πραγματοποιήθηκε σε μια εικονική μηχανή(Virtual Machine-VM), που δημιουργήθηκε στο Oracle VM VirtualBox, λειτουργικού συστήματος Ubuntu 16.04 LTS, όπου εγκαταστάθηκε ένα προγραμματιστικό εργαλείο που βασίζεται στη ροή, το οποίο αναπτύχθηκε από την ομάδα των IBM Emerging Technology Services<sup>[20]</sup>, το Node-RED. Έγινε χρήση , λοιπόν, του Node-RED (version v0.14.6) το οποίο αποτελείται από ένα χρόνο εκτέλεσης που βασίζεται στο Node.js<sup>[20]</sup> (version v4.2.6) και η γλώσσα προγραμματισμού που χρησιμοποιήθηκε είναι η JavaScript.
